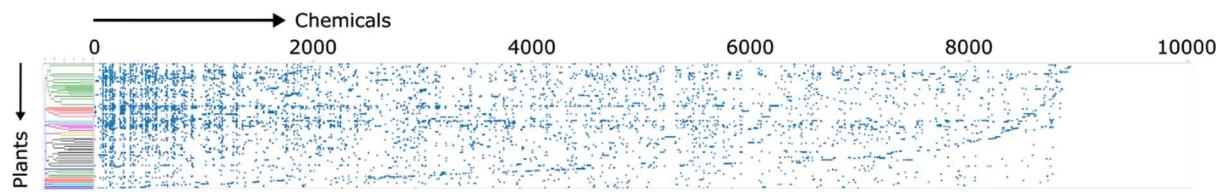

Figure S1. Visualization of non-zero values of the data matrix for the plants and chemicals, where the rows correspond to the plants and the columns correspond to the chemicals. The rows were permuted according to the order determined by the hierarchical clustering of the plants.

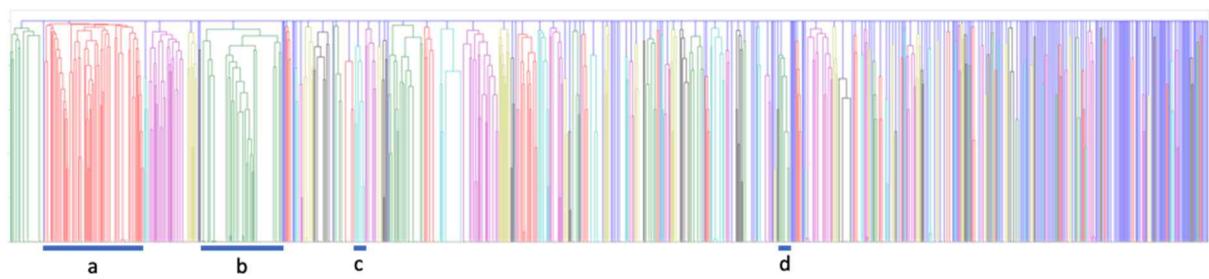

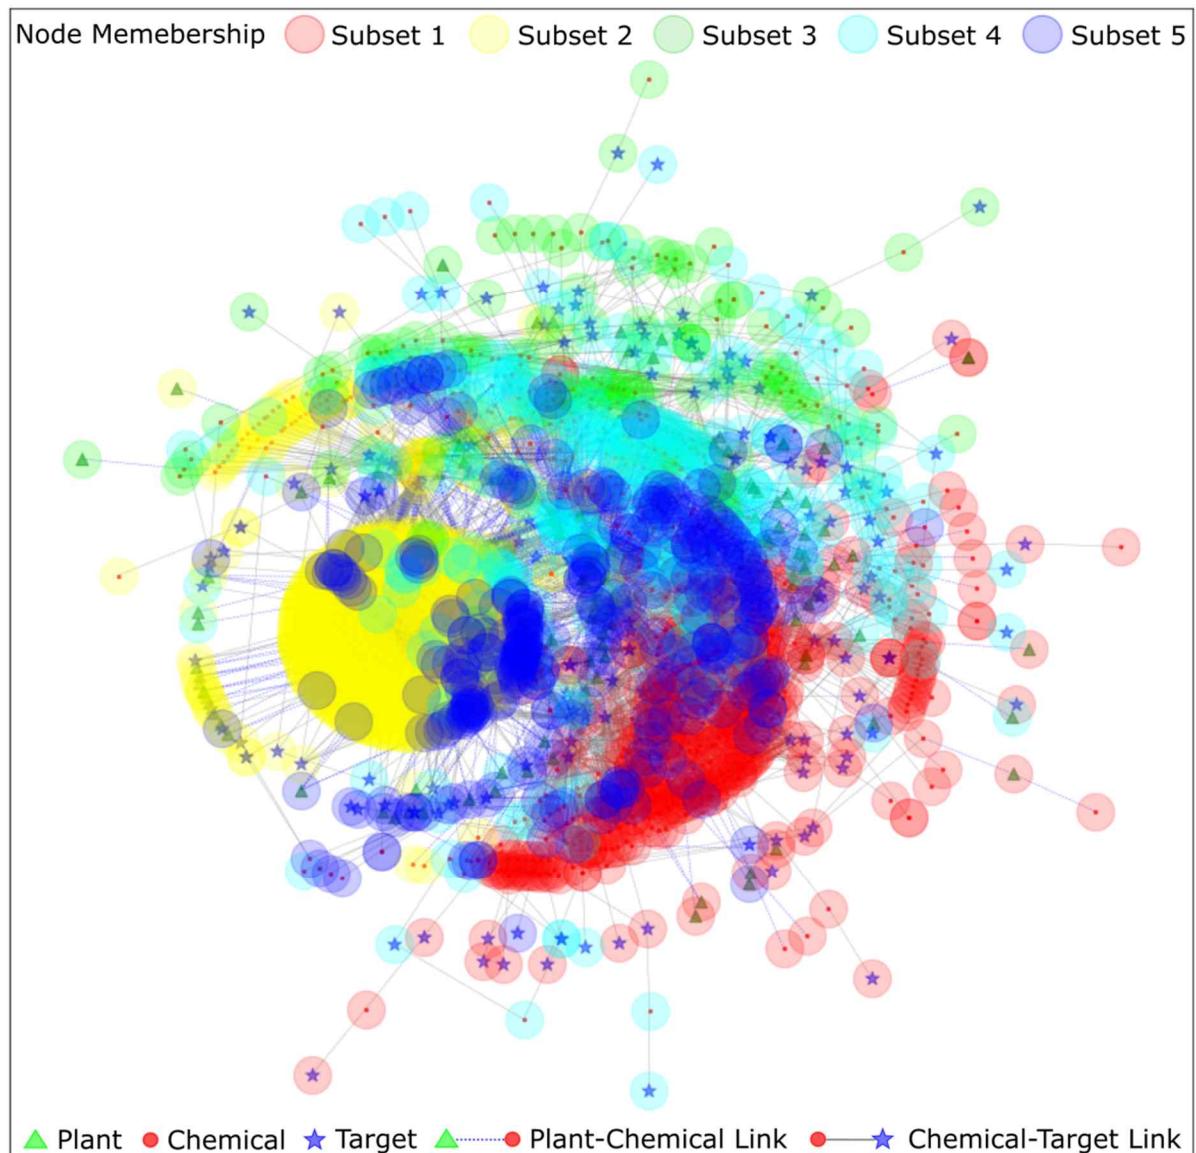

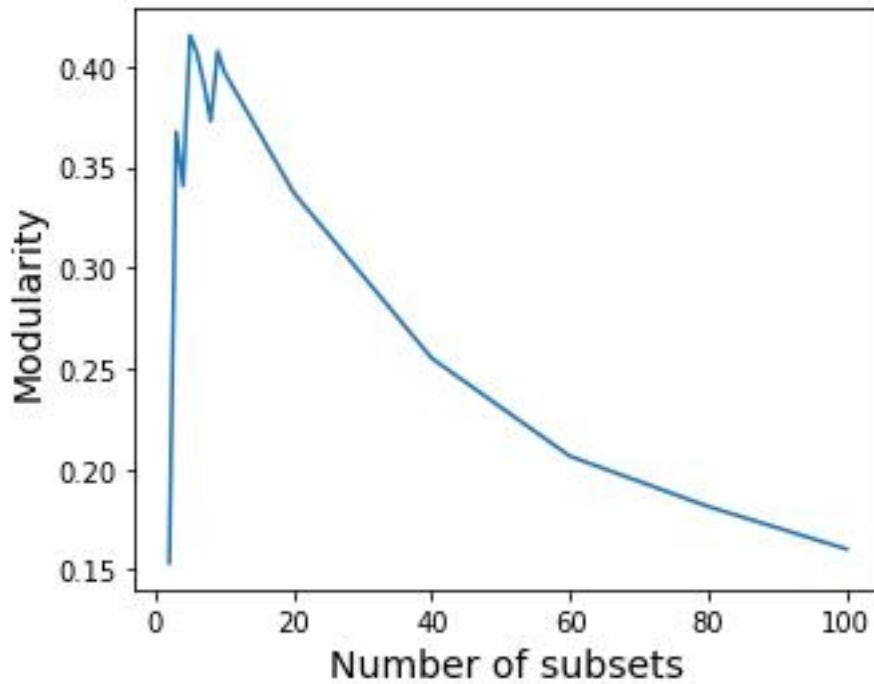

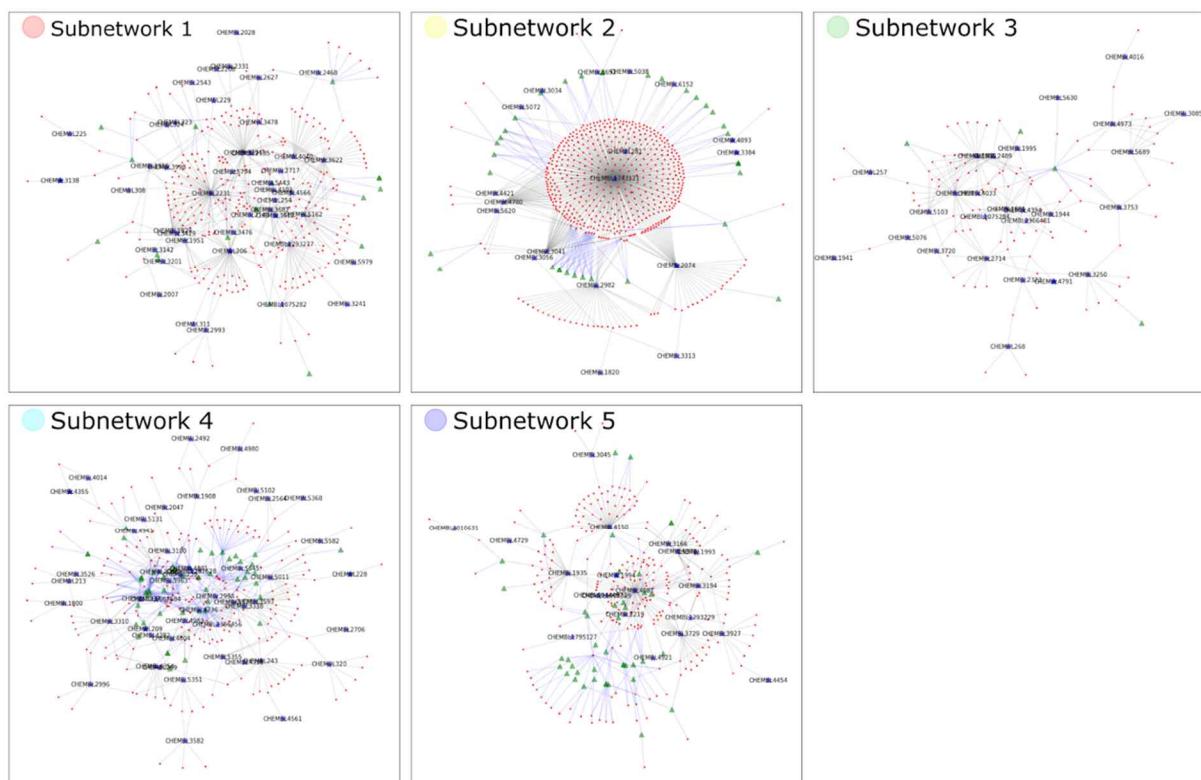

Figure S2. The whole dendrogram for clustering of plants obtained by the hierarchical clustering analysis. **a-d:** the dendograms of **Figures 2A, 2C, 2E** and **2H**, respectively.

Figure S3. Visualization of the results of the spectral co-clustering. **(A)** Spectral co-clustering of the whole network. **(B)** The modularity values for the determination of the number of clusters for the spectral co-clustering algorithm. **(C)** The subnetworks induced by each of the

five subsets of nodes obtained by the spectral co-clustering. The 10% of the whole nodes were randomly selected for visualization.

Table S1. The structural properties of the whole network and the five subnetworks obtained by the spectral co-clustering algorithm.
