

Figure S1. GWAS of root elongation in control conditions. **(a)**. Distribution of root elongation of Ting's core collection grown in control conditions; **(b)**. Box plots for root elongation under high Zn ($120 \mu\text{M}$) conditions and without Zn toxicity. The p -value of Student's t -test was shown for comparing root elongation under high and without Zn toxicity; **(c)**. Manhattan plot of GWAS using root elongation without Zn toxicity. Chromosomes are depicted in different colors. The green line depicts the adjusted significant threshold ($p=0.94 \times 10^{-5}$).

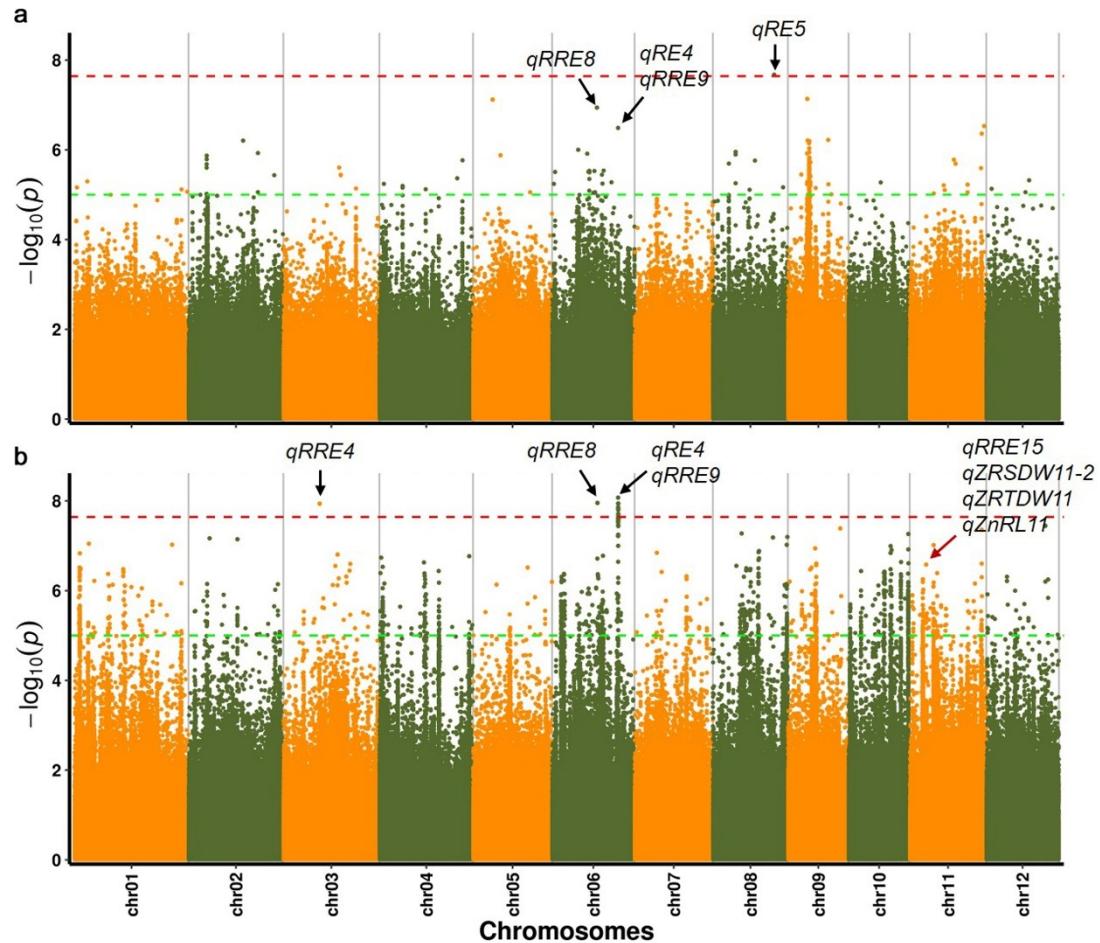

Figure S2. GWAS of Zn tolerance in high Zn conditions using LMM model. **(a).** Manhattan plot of GWAS using root elongation in high Zn conditions; **(b).** Manhattan plot of GWAS using relative root elongation in high Zn conditions. Chromosomes are depicted in different colors. The horizontal red line depicts the significant threshold ($p=2.27 \times 10^{-7}$) and the green line depicts the adjusted significant threshold ($p=0.94 \times 10^{-5}$). The black arrows represent the significant loci detected using EMMAX and LMM models. The red arrow represents the same loci as the previously reported under Zn stress.
