

Supplementary Figure S4. Nutrient intensity response curve for nutritropic response of main roots (passed or coiled) of WRC 25. Frequencies of passed and coiled responses were determined in the nutritropic bioassays with nutrient sources containing 25, 50, 75, 100, 125, 150, 175, 200, 225 or 250 mM NH₄⁺ and Pi.
