Figure S1. Photos of dwarf rootstock M9T337 (‘Red Fuji’/M9T337) and arborized rootstock *Malus hupehensis* Rehd. (‘Red Fuji’/*M. hupehensis* Rehd.)

Table S1. ANOVA analysis for the effects of studied factors (N rate and rootstock) on the biomass of apple organs. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	Root		Trunk		Perennial branch		Annual branch		Leaf		Fruit	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	14.478	<0.001	1.894	0.185	25.052	<0.001	38.523	<0.001	16.342	<0.001	12.290	<0.001
Rootstock (R)	0.966	0.340	0.034	0.857	0.681	0.421	0.596	0.451	1.039	0.323	0.995	0.333
N × R	6.114	<0.01	0.630	0.681	10.265	<0.001	17.260	<0.001	7.079	<0.01	5.099	<0.01

Table S2. ANOVA analysis for the effects of studied factors (N rate and rootstock) on annual branch length, leaf area, and chlorophyll content of apples. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	Annual branch length		Leaf area		Chlorophyll content	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	9.586	<0.001	3.699	<0.05	5.181	<0.01
Rootstock (R)	69.647	<0.001	10.178	<0.01	2.130	0.15
N × R	30.265	<0.001	1.448	<0.001	2.433	<0.01

Table S3. ANOVA analysis for the effects of studied factors (N rate, DMPP application and year) on root activity and root morphology. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	Root activity		Root length		Root tips		Root surface		Root volume	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	7.863	<0.001	110.884	<0.001	61.494	<0.001	11.713	<0.001	30.260	<0.001
Rootstock (R)	2.807	0.097	0.874	0.364	1.666	0.215	6.876	<0.05	2.887	0.109
N × R	3.794	<0.01	557.057	<0.001	312.866	<0.001	25.344	<0.001	56.584	<0.001

Table S4. ANOVA analysis for the effects of studied factors (N rate and rootstock) on %Ndff-

SP, %Ndff-SU and %Ndffs. SP and SU represent ¹⁵N application in spring and summer,

respectively. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	%Ndff-SP		%Ndff-SU		%Ndffs	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	6.180	<0.05	5.351	<0.05	6.244	<0.05
Rootstock (R)	0.456	0.502	0.829	0.366	0.679	0.413
N × R	2.176	0.099	2.049	0.115	2.284	0.087

Table S5. ANOVA analysis for the effects of studied factors (N rate and rootstock) on utilization rate, residual rate, and loss rate of fertilizer¹⁵N. SP and SU represent ¹⁵N application in spring and summer, respectively. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	¹⁵ N utilization rate-SP		¹⁵ N utilization rate-SU		¹⁵ N residual rate-SP		¹⁵ N residual rate-SU		¹⁵ N loss rate-SP		¹⁵ N loss rate-SU	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	17.678	<0.01	4.618	0.057	25.947	<0.001	52.699	<0.001	105.663	<0.001	21.393	<0.001
Rootstock (R)	5.361	<0.05	20.309	<0.001	3.342	0.097	14.012	<0.01	0.275	0.612	3.185	0.105
N × R	524.419	<0.001	275.970	<0.001	97.002	<0.001	19.009	<0.001	43.460	<0.001	33.937	<0.001

Table S6. ANOVA analysis for the effects of studied factors (N rate and rootstock) on utilization, residue, and loss of fertilizer N. SP and SU represent N application in spring and summer, respectively. Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	Utilization-SP		Utilization-SU		Residue-SP		Residue-SU		Loss-SP		Loss-SU	
	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	1.311	0.279	3.116	0.108	136.184	<0.001	194.717	<0.001	3932.190	<0.001	333.302	<0.001
Rootstock (R)	65.453	<0.001	28.803	<0.001	0.636	0.444	0.427	0.528	0.018	0.896	0.248	0.629
N × R	191.449	<0.001	280.645	<0.001	356.014	<0.001	861.678	<0.001	3644.276	<0.001	548.569	<0.001

Table S7. ANOVA analysis for the effects of studied factors (N rate and rootstock) on MBN-SP

and MBN-SU. SP and SU represent ^{15}N application in spring and summer, respectively.

Significant ($P < 0.05$) values are highlighted using bold type.

Sources of variation	MBN-SP		MBN-SU	
	F value	<i>P</i> value	F value	<i>P</i> value
N rate (N)	14.701	<0.01	19.952	<0.001
Rootstock (R)	0.398	0.542	1.039	0.332
N \times R	4.646	<0.05	8.943	<0.01

Table S8. Chemical properties of experimental soil.

Soil parameters	
pH (1:2.5 water extract)	7.87
EC (1:5 water exact; dS m ⁻¹)	0.65
Organic matter (Walkley-Black; g kg ⁻¹)	18.23
Alkali-hydrolyzed N (Alkaline hydrolysis diffusion method; g kg ⁻¹)	0.07
Available phosphorus (Olsen; sodium bicarbonate extract; g kg ⁻¹)	0.04
Available potassium (Ammonium acetate extract; g kg ⁻¹)	0.22
Exchangeable calcium (Ammonium acetate extract; g kg ⁻¹)	0.49
Exchangeable magnesium (Ammonium acetate extract; g kg ⁻¹)	0.08

Note: Soil parameters are all based on soil dry weight.

Table S9. Nutrient content of chemical fertilizer.

Fertilizers	Nutrients
Urea	46% ^{14}N
^{15}N -urea	46% ^{15}N
Calcium superphosphate	14% P_2O_5 , 13% Ca, 8% S
Potassium sulfate	50% K_2O , 18% S
