

**Table S1.** Verification checklist of the intervention performance.

| Interventions   | Correctness |
|---|-------------|
| 1. Assessment of consciousness, breathing, placement of Guedel cannula (unresponsive, no breathing) |             |
| 2. Request for help: call a physician   |             |
| 3. Placing the patient in the supine decubitus position   |             |
| 4. Introduction of the cardiac massage table  |             |
| 5. Monitoring the patient: checking the rhythm on the monitor                                       |             |
| 6. Checking the pulse   |             |
| 7. Defibrillation: correct placement of paddles or electrodes apical and sternal                    |             |
| 8. Correct selection of shock power: shock  |             |
| 9. Introduction of the cardiac massage table  |             |
| 10. Starting the massage  |             |
