

Figure S1. Analysis of mean difference in relative abundance at the generic level between the N and ND groups. Upper part indicates a higher percentage of genus relative abundance in the ND group. Lower part indicates a higher percentage of genus relative abundance in the N group.

Figure S2. Analysis of mean difference in relative abundance at the generic level between the N and CD groups. Upper part indicates a higher percentage of genus relative abundance in the CD group. Lower part indicates a higher percentage of genus relative abundance in the N group.

Figure S3. Analysis of mean difference in relative abundance at the generic level between the FCD and CD groups. Upper part indicates a higher percentage of genus relative abundance in the FCD group. Lower part indicates a higher percentage of genus relative abundance in the CD group.
