

Figure S1. Recognition of native NS1 protein from DENV2 by HuMabs using western blot. DENV-2 -infected C6/36 cell lysates are harvested and fractionated in 10% SDS-polyacrylamide gel. The blots are incubated with four HuMabs. Lane 1-8 represent molecular weight protein ladder, HuMabs no. 8, 238, M1, M20, anti-E HuMAb, anti-prM HuMAb, and DMEM medium, respectively.
