

Figure S4. Impact of macrohematuria on the mutant allelic fraction of *GPR126* 6th intron. Mutant allele fraction was assessed using digital droplet polymerase chain reaction on a QX200 AutoDG ddPCR System (Bio-Rad Laboratories, Inc.). *GPR126* 6th intron mutations: G/A substitution – chr. 6: 142,706,206; C/T substitution – chr. 6: 142,706,209 (assembly GRCh37).
