

## SUPPLEMENTARY DATA

### SUPPLEMENTARY FIGURE 1

**Supplementary Figure S1. Effects of FGF1 and EGF on MCF-7 cell proliferation and migration.** (A) Effects of FGF1 and EGF stimulation (10 ng/mL, 48 h) on cell proliferation in the absence of cytotoxic drugs (B) The effect of FGF1 and EGF stimulation (10 ng/mL, 36 h) on cell migration in the absence of cytotoxic drugs. Data were normalized and are presented as mean values  $\pm$  standard deviation (SD) from three independent experiments. Statistical significance: \*  $p < 0.05$ , \*\*  $p < 0.01$ , no significant differences indicated as 'ns'

## SUPPLEMENTARY FIGURE 2

**Supplementary Figure S2. Effects of FGF1 and EGF on MCF-7 cell migration in the presence of taltobulin.** The effect of FGF1 and EGF on MCF-7 cell migration in the presence of 5 nM taltobulin was examined after 36 h using IncuCyte® Cell Migration and Invasion System. Presented data are representative images of wound healing.
