

Supplementary Materials

Supplementary Table S1. Results of ROC analysis evaluating the utility of criteria and non-criteria aPLs in predicting the APS subtype – primary or secondary.

aPLs	Area Under the Curve	95% CI	
		Lower limit	Upper limit
aCL IgG	0.348	0.216	0.480
aCL IgM	0.440	0.303	0.577
a β 2GPI IgG	0.500	0.357	0.642
a β 2GPI IgM	0.447	0.311	0.583
aPE IgG	0.503	0.363	0.644
aPE IgM	0.493	0.349	0.637
aPS IgG	0.399	0.265	0.534
aPS IgM	0.427	0.290	0.564
aPT IgG	0.517	0.377	0.658
aPT IgM	0.444	0.301	0.587

APS – antiphospholipid syndrome; aPLs – antiphospholipid antibodies; aCL – anti-cardiolipin antibodies; a β 2GPI – anti- β 2 glycoprotein I antibodies; aPE – anti-phosphatidylethanolamine antibodies; aPS – anti-phosphatidylserine antibodies; aPT – anti-prothrombin antibodies; Ig – immunoglobulin; ROC – receiver operating characteristic curve.

Supplementary Table S2. Results of ROC analysis evaluating the utility of criteria and non-criteria aPLs in predicting deep venous thrombosis, deep venous thrombosis associated with arterial thrombosis, and deep venous thrombosis associated with obstetric morbidity.

aPLs	Deep Venous Thrombosis			Deep Venous Thrombosis + Arterial Thrombosis			Deep Venous Thrombosis + Obstetric Morbidity		
	Area Under the Curve	95% CI		Area Under the Curve	95% CI		Area Under the Curve	95% CI	
		Lower limit	Upper limit		Lower limit	Upper limit		Lower limit	Upper limit
aCL IgG	0.411	0.276	0.547	0.339	0.110	0.567	0.487	0.148	0.826
aCL IgM	0.422	0.284	0.560	0.388	0.102	0.674	0.544	0.123	0.964
a β 2GPI IgG	0.429	0.288	0.570	0.388	0.162	0.614	0.614	0.285	0.942
a β 2GPI IgM	0.372	0.234	0.509	0.445	0.209	0.682	0.602	0.237	0.968
aPE IgG	0.350	0.213	0.487	0.165	0.064	0.267	0.348	0.057	0.640
