## Intra- and Interspecies conjugal transfer of plasmids in Gram-negative bacteria

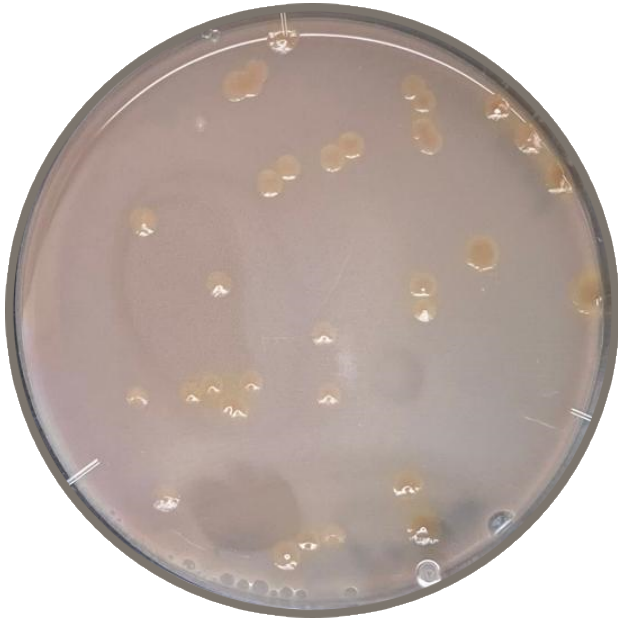

Julia R. Savelieva, Daria A. Kondratieva and Maria V. Golikova

**Figure S1.** A schematic illustration of the hollow-fiber infection model (HFIM).

**Figure S2.** Agarose gel electrophoresis of *K. pneumoniae*, *E. coli* and *P. aeruginosa* transconjugants amplification products, 10V/cm, 0.9% agarose, DNA size markers 250-10000 bp or 100-1500 bp.

**Figure S3.** “Possible” transconjugant colonies of *P. aeruginosa* grown on agar with rifampicin and meropenem.
