S1. Identification of mineral elements by X-ray phase analysis

X-ray phase analysis for different types of papers determined the presence of all metals in the dry samples (Table S3). The X-ray spectra of the samples of different papers are shown in Figure S1.

Table S3. X-ray phase analysis of minerals for different types of papers.

Sample	Content of Chemical Elements, %										
	Al	Si	P	Cl	Ca	Mn	Fe	K	Zn	S	Cu
Sample #1 Control	0.028	0.063	0.037	0.299	17.74	0.002	0.022	-	-	-	-
Sample #2 (flax straw treated with 30% NaOH)	0.038	0.055	0.07	0.057	2.318	0.014	0.05	0.027	-	-	-

Sample #4 (flax straw treated with 1% HNO ₃ and 25% NaOH)	0.221	0.131	0.075	0.103	1.12	0.004	0.21	0.05	0.013	-	0.002
Sample #5 (flax straw treated with 4% HNO ₃ and 25% NaOH)	0.568	0.123	0.804	0.1	0.834	-	-	0.032	0.005	0.03	-
Sample #6 (wheat straw treated with 25% NaOH)	0.443	0.193	0.064	0.178	2.775	-	0.057	1.196	0.005	-	-

Sample #7 (rice straw treated with 25% NaOH)	0.015	0.817	0.307	0.145	0.658	-	0.029	0.481	0.001	0.136	-
Sample #8 (cardboard)	0.092	0.174	0.238	0.245	1.803	-	0.147	0.188	0.005	0.453	-

Sample #1 Control

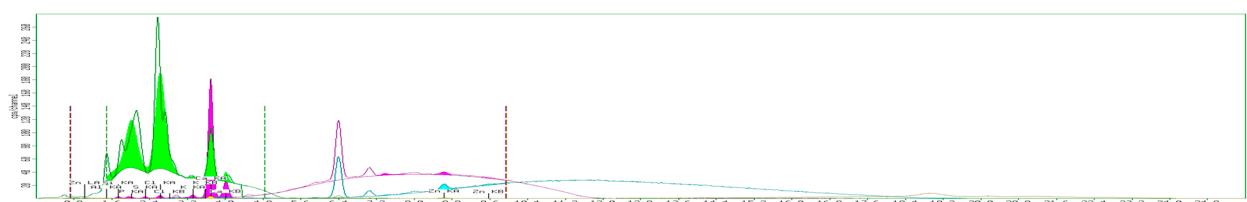

Sample #2 (flax straw treated with 30% NaOH)

Sample #3 (flax straw treated with 20% NaOH)

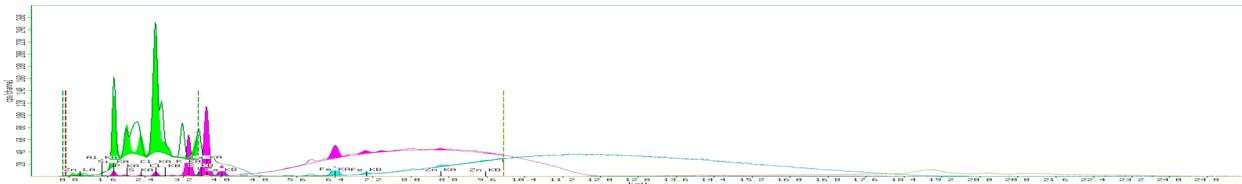

Sample #4 (flax straw treated with 1% HNO₃ and 25% NaOH)

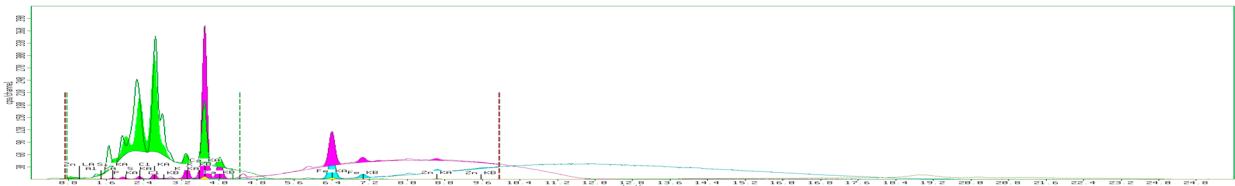

Sample #5 (flax straw treated with 4% HNO₃ and 25% NaOH)

Sample #6 (wheat straw treated with 25% NaOH)

Sample #7 (rice straw treated with 25% NaOH)

Sample #8 (cardboard)

Figure S1. X-ray spectra of samples of different papers.

Flax straw treated with 30% NaOH showed the highest amount of calcium (Ca), which affects the strength of the material and the least amount of chlorine, making it a more environmentally friendly product.

S2. Photo Reports on Obtaining Environmentally Friendly Packaging Material

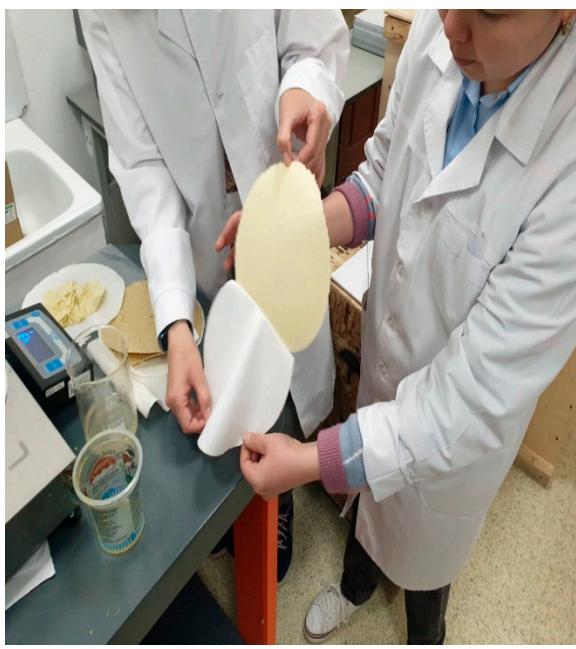

Figure S2. Boiling straw in a water bath.
