

Supplement document

Figure S1: The photo of four chicken breeds purchased from commercial farms: Malaysian village chicken (a), colored broiler Hubbard (b), broiler Cobb (c), and spent laying chicken Dekalb (d).

Figure S2: The photo of pectoralis major muscle and serum collected in this study.

Figure S3: Total ion chromatogram for pectoralis major samples.

Figure S4: Total ion chromatogram for chicken serum samples.

Table S1: Information of chicken breed samples collected.

Table S2: Method performance on precision and retention time of GC-MS method, RSD (%).

Table S3: List of annotated metabolites from GC-MS analysis for pectoralis major. (n=5)

Table S4: List of annotated metabolites from GC-MS analysis for chicken serum. (n=5)

Table S5: Calibration curves, linear range, limit of detection, and quantification measured by GC-MS method for pectoralis major muscle ($\mu\text{g}/\text{mg}$) and serum ($\mu\text{g}/\text{ml}$).

Table S6. Repeatability and recovery of GC-MS method for pectoralis major muscle ($\mu\text{g}/\text{mg}$) and serum ($\mu\text{g}/\text{ml}$).

Table S7. Comparison of fold intensity values of tentative metabolites in pectoralis major from any two breeds between clusters.

Table S8. Comparison of fold intensity values of tentative metabolites in chicken serum from any two breeds between clusters.

Table S9: Nutrient composition (%) of commercial feeds from the respective commercial farms.

(b)

(c)

(d)

Figure S1: The photo of four chicken breeds purchased from commercial farms: local village chicken (a), colored broiler-Hubbard (b), broiler-Cobb (c), and spent laying hen-Dekalb (d).

(a)

(b)

Figure S2: The photo of pectoralis major muscle (a) and serum (b) collected in this study.

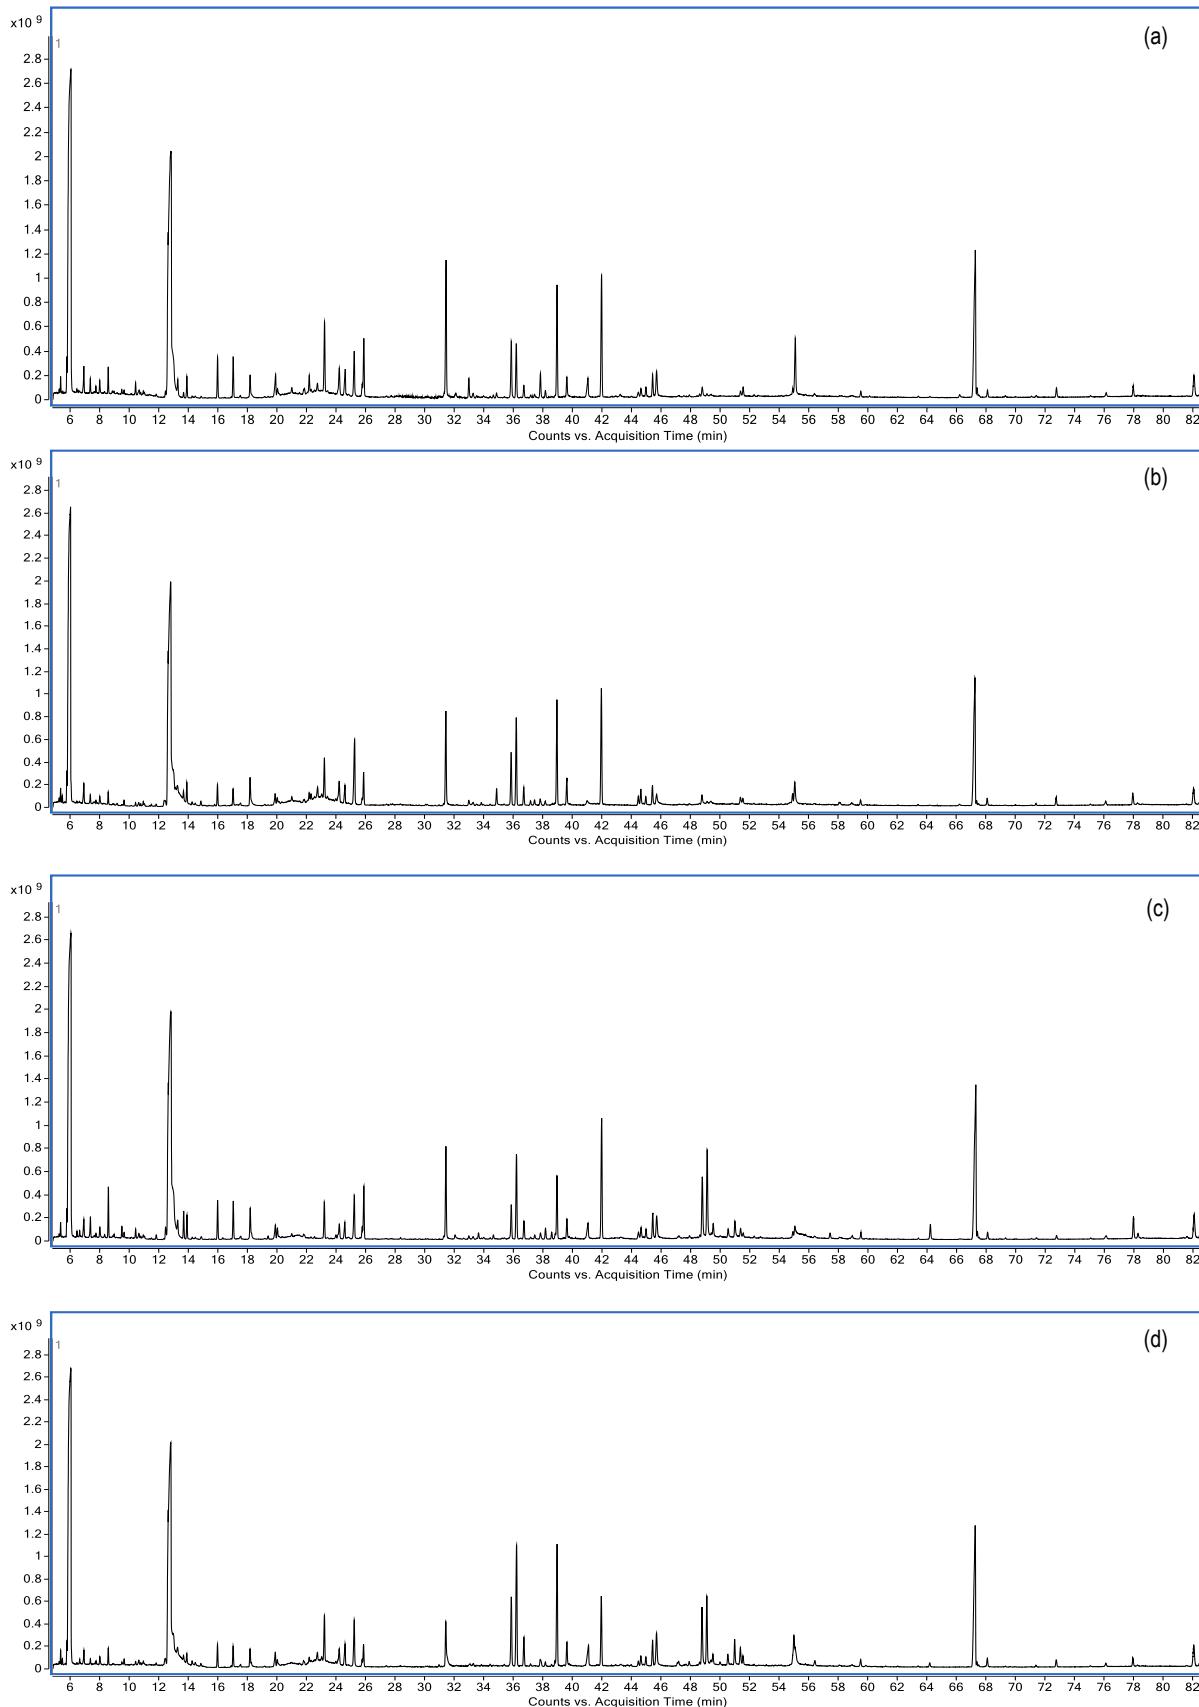

Figure S3. Total ion chromatograms for pectoralis major muscle of different chicken breeds by using GC-MS analysis. (a) village chicken, (b) colored broiler-Hubbard, (c) broiler-Cobb, (d) Spent laying hen-Dekalb

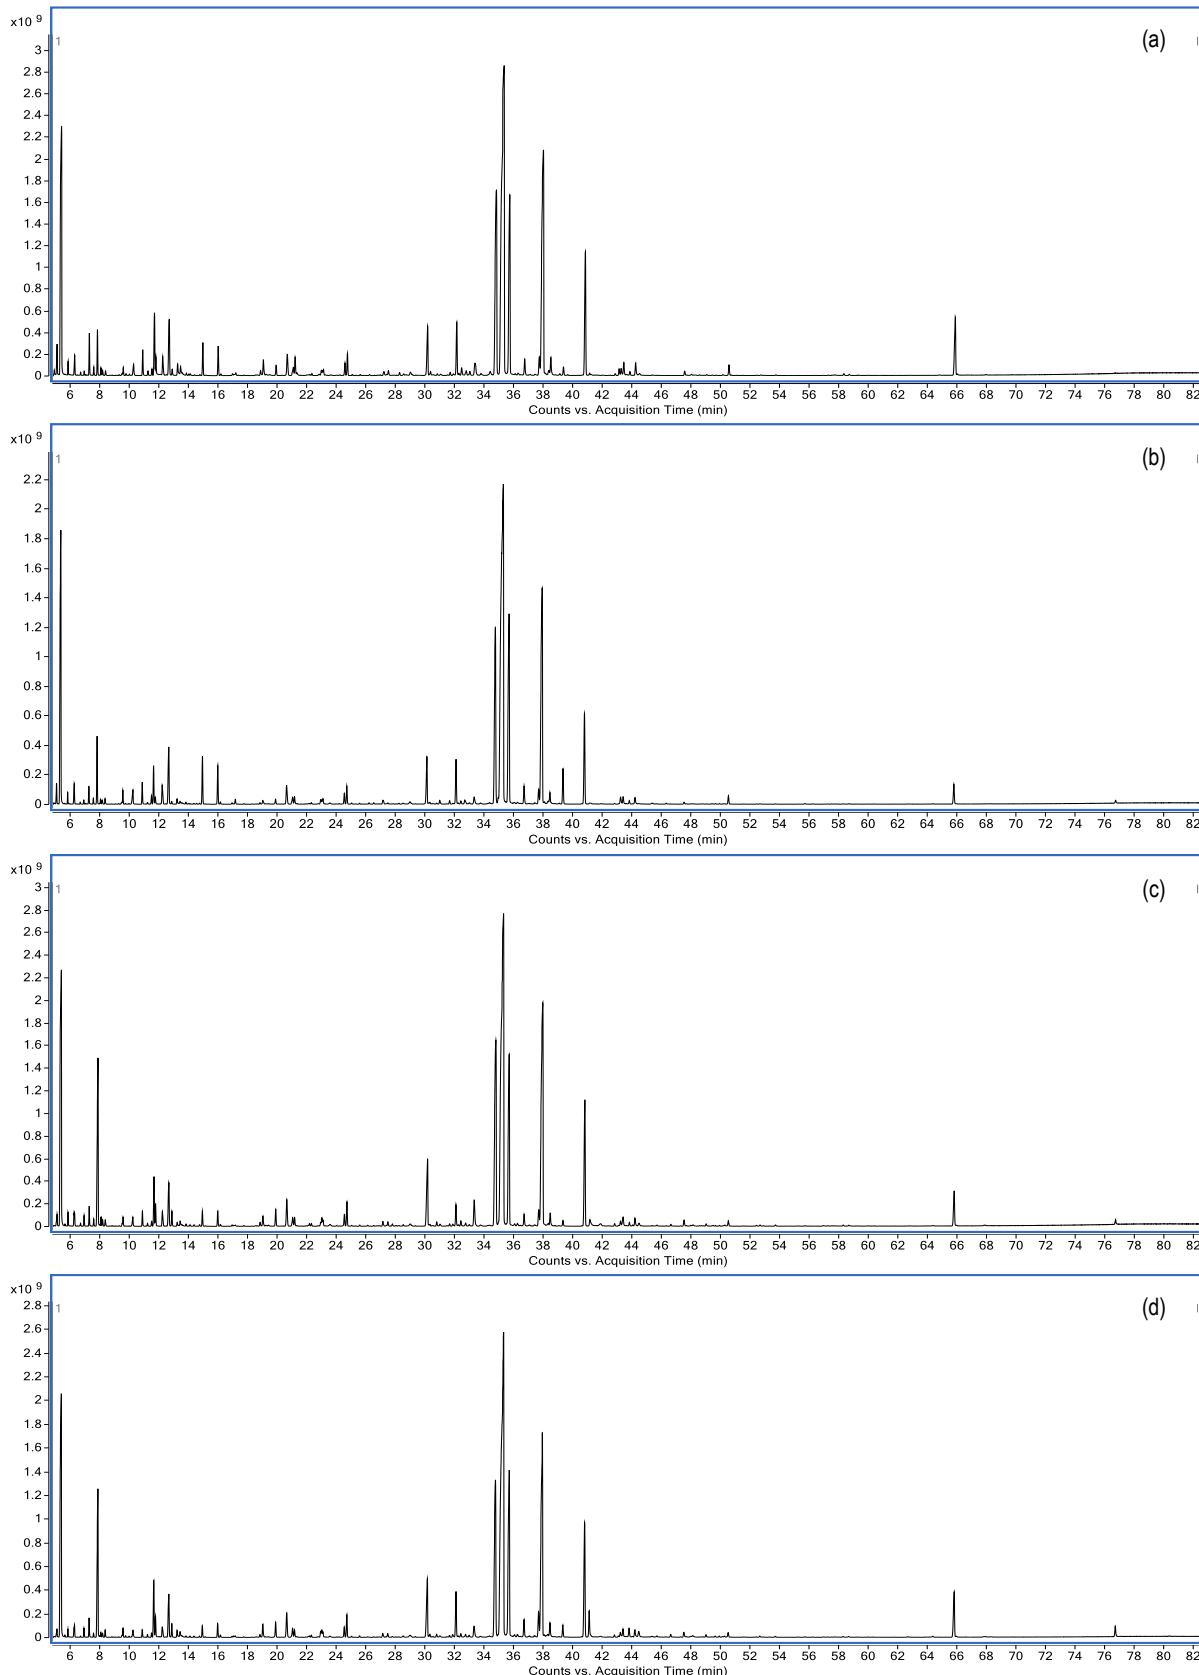

Figure S4. Total ion chromatograms for serum of different chicken breeds by using GC-MS analysis. (a) village chicken, (b) colored broiler-Hubbard, (c) broiler-Cobb, (d) Spent laying hen-Dekalb

Table S1: Information of chicken breed samples collected in this study.

No	Type of chicken	Market age	Market size	Type of feeding	Farm	Rearing condition	Temperature (°C)	Humidity (%)
1	village chicken	14 weeks	1010.5 ± 47.6 g	Commercial feed (Gold coin)	Commercial farm Pahang Tua, Pahang	Open house floor system	25 - 28	50 - 60
2	Colored broiler (Hubbard)	10 weeks	2055.5 ± 66.4 g	Commercial feed (Gold coin)	Commercial farm Permatang Tinggi, Penang	Open house floor system		
3	Broiler (Cobb)	6 weeks	2487.5 ± 53.5 g	Commercial feed (Gold coin)	Commercial farm Bukit Mertajam, Penang	Closed house floor system		
4	Spent laying chicken (Dekalb)	72 weeks	1847.9 ± 58.7 g	Commercial feed (Gold coin layer)	Commercial farm Butterworth, Penang	Closed house cages system
