Sample preparation for HPLC

A volume of 2 mL of methanol/water (80/20, v/v) extraction solution was utilized to ultrasonically extract 8 mL of soybean sauce for 20 min. After filtration through a filter paper, 2 mL of the filtrate were passed through an immunoaffinity column at the flow rate of approximately 1 drop per second. Wash the immunoaffinity column with 2 mL of water at a flow rate of 1-2 drops per second until 2-3 mL of air passed through the column. Then, the analytes were eluted into the vial with 1 mL of methanol at a flow rate of 1 drop per second. The eluates were evaporated to dryness under a stream of nitrogen at 45 °C. The residues were redissolved in 500 µL of methanol and filtered through 0.22 µm filters prior to HPLC analysis.

HPLC-FLD conditions

HPLC analysis was performed using a C18 column (Agilent SB-C18, 150 mm×4.6 mm, 5 μ m) in a Agilent 1260 HPLC chromatographic system under isocratic conditions and column temperature was maintained at 30 °C. water/methanol/acetonitrile (42:40:18, v/v) were used as mobile phase. The sample (10 μ l) was injected at a flow rate of 1 ml/min. The FLD detection was obtained by means of a Agilent 1260 G1321C Fluorescence Detector (λ_{ex} =360 nm, λ_{em} = 450 nm). **Figure S1** is the HPLC chromatogram of soybean sauce, it indicated that the commercial soybean sauce is AFB1-free.

Figure S1. (A) Aflatoxin typical standard chromatogram with aflatoxin B1 at 50 ng/mL, B2 at 12.5 ng/mL, G1 at 50 ng/mL, and G2 at 12.5 ng/mL; (B) The HPLC chromatogram of commercial AFB1-free soybean sauce.

Figure S2 is the calibration plot in the presence of various concentrations of AFB1 in 2% soybean sauce samples. After conducting a linear regression analysis, the formula $Y = 33.4475X + 22.5945$ was derived, where the logarithm of the AFB1 concentration (X) and the fluorescence extent (Y) is represented respectively. In the concentration range from 5 to 500 ng/mL, a strong linear relationship between the parameters was discovered ($R^2=0.9936$). The LOD in this experiment turned out to be 1.92 ng/mL.
