

Supplementary information

for the manuscript:

Contrasting performance of two winter wheat varieties susceptible to leaf rust under diverse pathogen pressure, fungicide application, and cultivation practices

Supplementary Table S2. Regression analysis of the most influencing factors on yield, TKW, and crude protein responses to fungicide application in winter wheat varieties Barbee and Zvezdana

Dependent variable: yield response to fungicide treatment					
Source	DF	Adj SS	Adj MS	F-Value	P-Value
Regression	18	2115,8	117,55	2,29	0,005
Leaf rust*Treatment	17	1895,0	111,47	2,17	0,009
Variety*Locality (cultivation system)	1	739,9	739,93	14,38	0,000
Error	112	5761,6	51,44		
Total	130	7877,4			

Dependent variable: TKW response to fungicide treatment					
Source	DF	Adj SS	Adj MS	F-Value	P-Value
Regression	20	1152,82	57,64	3,65	0,000
Variety	1	347,04	347,04	21,95	0,000
Cultivation system	1	178,58	178,58	11,30	0,001
Leaf rust*Treatment	17	405,53	23,85	1,51	0,104
Variety*Locality (cultivation system)	1	34,99	34,99	2,21	0,140
Error	111	1754,92	15,81		
Total	131	2907,74			

Dependent variable: crude protein response to fungicide treatment					
Source	DF	Adj SS	Adj MS	F-Value	P-Value
Regression	1	199,3	199,31	3,42	0,067
Leaf rust	1	199,3	199,31	3,42	0,067
Error	130	7576,4	58,28		
Total	131	7775,7
