

**Supplementary Figure S3.** Agarose gel electrophoresis of diagnostic PCRs using *Metarhizium* PARB species-discriminating primer pairs (Suppl. Table S3) specific for *M. anisopliae sensu stricto* (A), *M. brunneum* (B), *M. pinghaense* (C), and *M. robertsii* (D). The length of relevant signals in the size standard is indicated at the left margin. Lane labels on top of the picture designate the *Metarhizium* species, strain or isolate; “T” indicates nomenclatural type strains. “M” denotes the size standard, “C-” the negative (no template) control.
