

Supplementary figure

Representative GC-MS tracing

Chromatograph from part of the “third study” discussed in Results. The starting materials were the air (“Gas”) phase from double plate apparatuses. From top to bottom, the tracings are from PA14 inocula, *lasR*-/*rhlR*- inocula, uninoculated TSA plate, and 2 empty plates, respectively. The peaks shown, and those from the 3 other studies not shown, are identified and arranged in Tables 1-3.
