

Supplementary Figure S4. Neighbor-Joining (NJ) phylogeny of *Metarhizium* fungi as reconstructed from 5TEF sequences. Terminal branches are labelled by genus, species and strain designations; “TYPE” denotes the nomenclatural type strain of a species. Numbers on branches indicate bootstrap support percentages. The size bar corresponds to 1 % sequence divergence; branches drawn as dashed lines are not to scale. The 5TEF sequence from the *M. acridum* type strain has been used as outgroup.
