

Fig. S2. (A) Percentage of Atg13 domains deletion related strains with vacuolar accumulated GFP-Atg8. (B) Immunoblotting assay for GFP-Atg8 cleavage under YPD conditions. (C) Percentage of autophagy regulators deletion related strains with vacuolar accumulated GFP-Atg8. More than 300 cells were counted. Data represent means \pm SEM, $n = 3$. * $p < 0.05$, ns = not significant.
