

Supplementary Figures

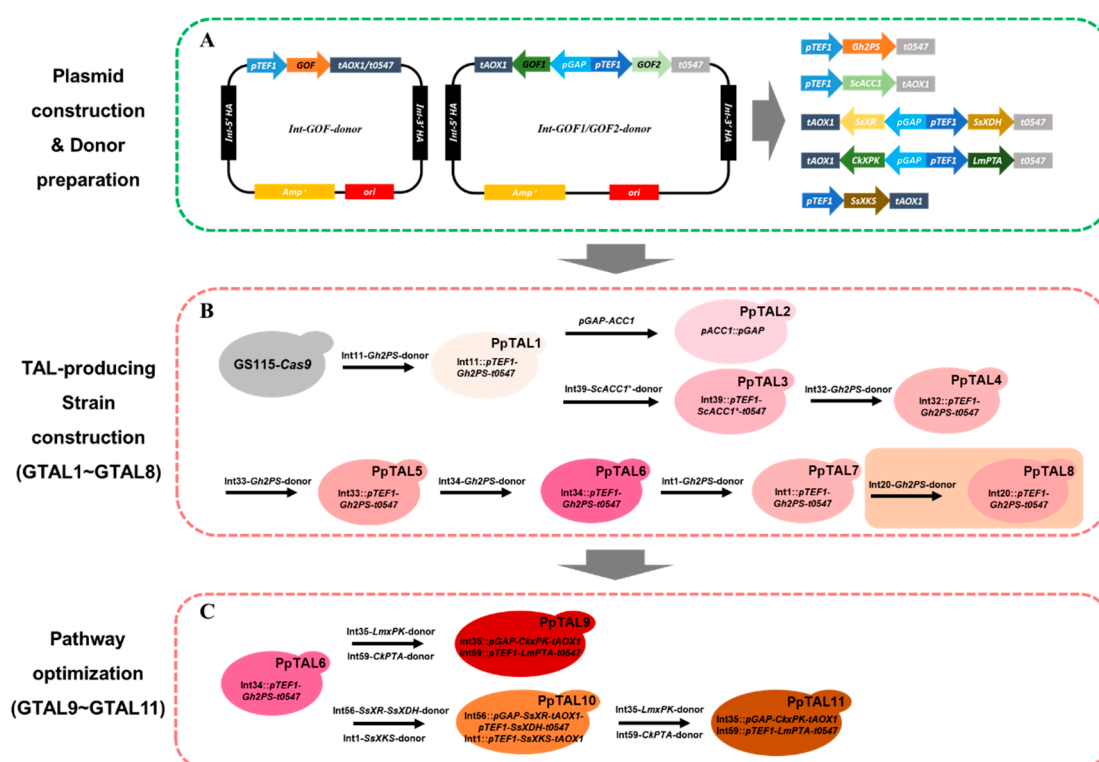

Figure S1. Schematic diagram of plasmid and strain construction in this study. (A) Schematic diagram of gene integration expression cassette and plasmid construction. (B) Schematic diagram of TAL-producing strains construction. (C) Schematic diagram of the pathway optimization strain construction for enhanced acetyl-CoA synthesis and/or xylose utilization.

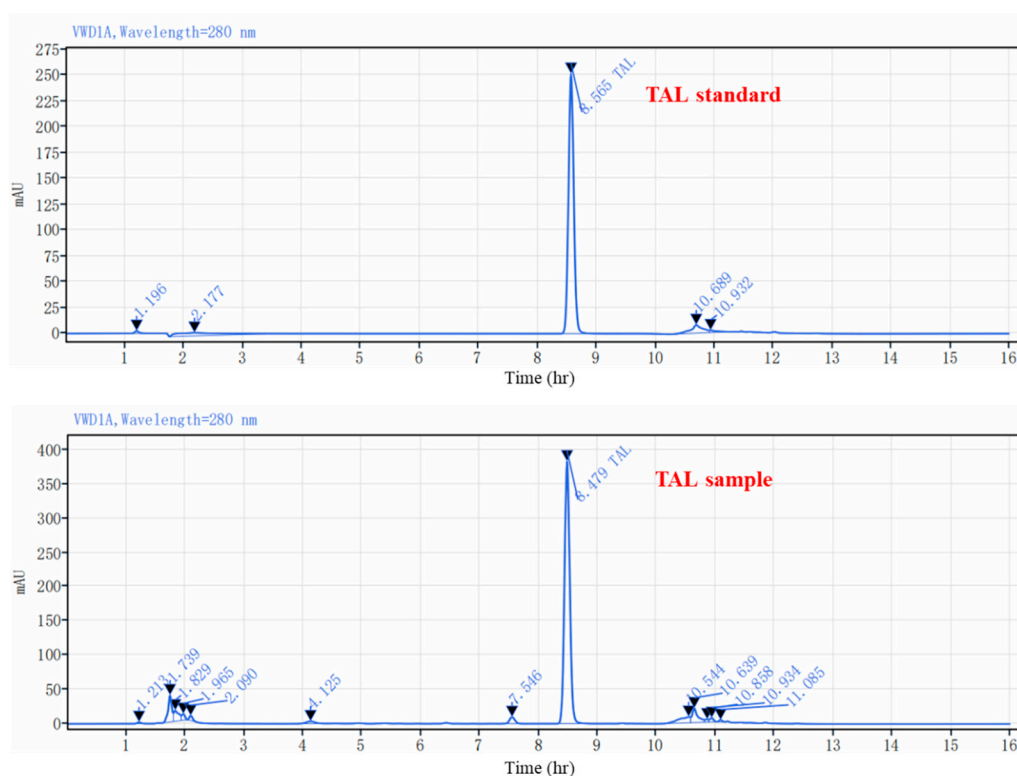

Figure S2. HPLC analysis for the identification and quantification of TAL. The peak corresponding to TAL was observed at ~8.50 min.

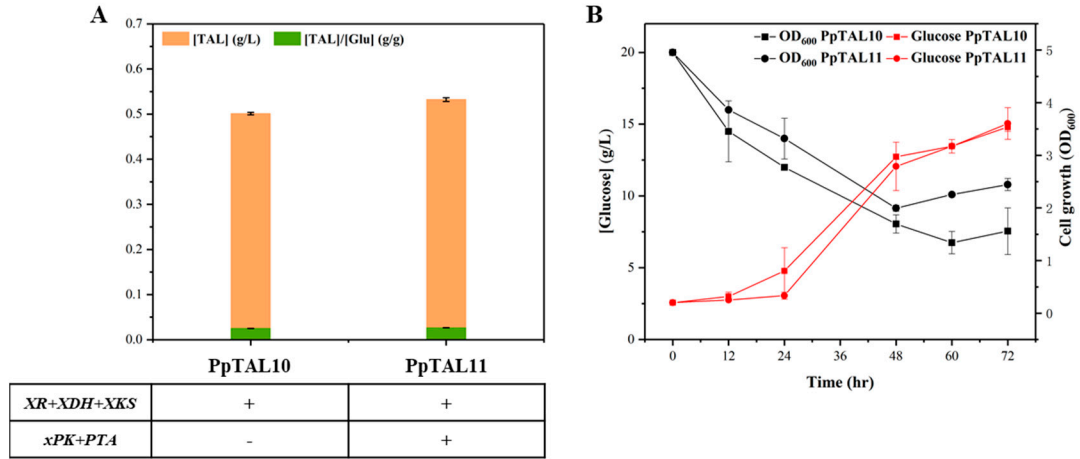

Figure S3. TAL production from glucose. (A) Comparison of TAL titer of the xylose utilization strain with or without the PK pathway in SCD medium. (B) Glucose consumption and cell growth profiles of PpTAL10 and PpTAL11 in SCD medium. The data represent three biological replicates and the error bars represent standard deviations.
