

Supplementary Materials Figure S1. Comparison of sensitivity (true-positive) and specificity (true-negative) of QFT-GIT by each influencing factor. The comparison of sensitivity specificity between groups was represented by histogram, Statistical significance of the differences between groups were assessed by variance analysis, * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$, **** $P < 0.0001$.
