1.1 Supplemental Tables

Table S1. Ethics committees approving clinical study.

Ethics committees approving clinical study

Principal Investigator	IRB/Ethic Committee	Reference number
Dr Albert Ludolph	Ethikkommission der Universität Ulm	412/16
Dr Siegfried Muhlack	Ethik-Kommission der Ruhr-Universität Bochum	16-5929
Dr Catherine Mummery	London-Central Research Ethics Committee Manchester HRA Centre	17/LO/0440
Dr Simon Ducharme	MUHC Neurosciences Research Ethics Board	2017-3206
Dr Juha Rinne	National Committee on Medical Research Ethics	73/06.00.01/2017
Dr Ralf Bodenschatz	Ethikkommission der Sächsischen Landesärztekammer	EK-AMG-MCB-155/16-1
Dr Peter Paul de Deyn	Central Committee on Research Involving Human Subjects	NL60032.000.16
Dr Anne Borjesson Hansen	Regionala etikprövningsnämnden i Stockholm Karolinska Institutet i Solna	2017/300-31
Dr Michael Jonsson	Regionala etikprövningsnämnden i Stockholm Karolinska Institutet i Solna	2017/300-31
Dr Daniel Blackburn	London-Central Research Ethics Committee Manchester HRA Centre	17/LO/0440
Dr Anja Schneider	Ethikkommission an der Medizinischen Fakultät der Rheinischen Friedrich-Wilhelms-Universität Bonn	035/18-AMG
Dr Phillipus Scheltens	Central Committee on Research Involving Human Subjects	NL60032.000.16

Table S2. Description of CSF biomarkers of AD pathology, glial activation, neuroaxonal damage, and synaptic injury.

CSF analyte	Biology indexed
Aβ42 (β -amyloid 1-42) Elecsys β -amyloid 1-42 CSF performed at Roche Diagnostics, Indianapolis, IN	Parenchymal amyloid accumulation
p-tau₁₈₁ (tau phosphorylated at threonine 181) Elecsys Phospho-Tau (181P) CSF performed at Roche Diagnostics, Indianapolis, IN	Tau pathophysiology. CSF p-tau ₁₈₁ may reflect a mix of amyloid and tau pathological changes in the brain and is, therefore, not a “pure” marker of tau tangle load in the brain.
NfL* (neurofilament light chain) Uman, performed at Immunologix, Tampa, FL	Neuroaxonal degeneration
Ng* (neurogranin) Euroimmune, performed at Immunologix, Tampa, FL)	Postsynaptic injury
YKL-40* (chitinase-3-like protein 1) ELLA (Protein Simple), performed at Immunologix, Tampa, FL)	Putative master regulator of microglial and astrocyte activation. YKL-40 is a context-dependent modulator of glial phagocytic activity in both mice and humans. The associations of this biomarker with transcriptional, morphological, and functional states of glia are not clear and clarity may require large multi-omic datasets and machine learning.

*All CSF samples for NfL, Ng, and YKL-40 were tested using a single batch of reagents.

Table S3. Mild AD phenotype across APOE4 allele frequency groups.

Variable		2 <i>APOEε4</i> (N = 10)	1 <i>APOEε4</i> (N = 23)	No <i>APOEε4</i> (N = 12)	1 or 2 <i>APOEε4</i> (N = 33)	Overall (N=45)	
Sex	Female	N (%)	6 (60.0%)	12 (52.2%)	4 (33.3%)	18 (54.5%)	
	Male	N (%)	4 (40.0%)	11 (47.8%)	8 (66.7%)	15 (45.5%)	
						(51.1%)

ICV, intracranial volume; MMSE, Mini-Mental Status Examination; RBANS, Repeatable Battery for the Assessment of Neuropsychological Status; SD, standard deviation; SEM, standard error of the mean.

1.2 Supplementary Figures

Figure S1: R squared linear regression results across all comparisons.

Comparison of all CSF biomarker linear regression results for the overall population (a), *APOE4* genotypes (b), sex (c), and combined *APOE4* genotypes and sex (d). Correlation coefficients were defined as: $0.81 \leq R^2 < 1$ as strong; $0.49 \leq R^2 < 0.81$ as moderately strong; $0.25 \leq R^2 < 0.49$ as moderate; $0.09 \leq R^2 < 0.25$ as weak; and $R^2 < 0.09$ as negligible. R-squared values are shown for each comparison. ◦ p<0.1; • p<0.05, •• p<0.01, ••• p<0.001. Linear regressions with a positive slope are shown in red and negative slopes are shown in blue. CSF amyloid β levels are inversely correlated with A β pathology.
