4-nitro	-24869.13183	-24416.02843	4.38	-42.14	-46.52

**Table S16.** Adsorption of 4-substituted pyridines on site 4 of (101) anatase surface in presence of dissociated water with OH on site 1 and H on O2c site 3 (Fig. S10a).

	F3, a.u.	F1, a.u.	E2, kcal/mol	E1, kcal/mol	E3, kcal/mol
4-NH2	-24719.74481	-24416.02471	6.72	-46.03	-52.75
4-methoxy	-24778.99187	-24416.02561	6.15	-44.92	-51.08
4-Methyl	-24703.66644	-24416.02616	5.81	-44.24	-50.05
H	-24664.35649	-24416.02663	5.51	-42.30	-47.81
4-acetyl	-24817.10542	-24416.02722	5.14	-43.86	-49.00
4-nitro	-24869.12853	-24416.02835	4.43	-40.07	-44.50

**Table S17.** Adsorption of 4-substituted pyridines on site 3 of (101) anatase surface in presence of dissociated water with OH on site 1 and H on O2c site 3 (Fig. S10b).

	F3, a.u.	F1, a.u.	E2, kcal/mol	E1, kcal/mol	E3, kcal/mol
4-NH2	-24719.75051	-24416.02248	8.12	-49.61	-57.73
4-methoxy	-24778.99716	-24416.02316	7.69	-48.25	-55.94
4-Methyl	-24703.67119	-24416.02349	7.48	-47.22	-54.70
H	-24664.36101	-24416.02407	7.12	-45.13	-52.25
4-acetyl	-24817.11097	-24416.02498	6.55	-47.34	-53.89
4-nitro	-24869.13223	-24416.02597	5.93	-42.39	-48.31

**Table S18.** Adsorption of 4-substituted pyridines through nitrogen protonation by the OH group of KOH doped (101) anatase surface (Fig. S11a).

	F3, a.u.	F1, a.u.	E2, kcal/mol	E1, kcal/mol	E3, kcal/mol
4-NH <sub>2</sub>	-25333.14254	-25029.46484	3.84	-22.30	-26.14
4-methoxy	-25392.38861	-25029.46472	3.92	-20.57	-24.49
4-Methyl	-25317.06434	-25029.4665	2.80	-20.61	-23.42
H	-25277.7548	-25029.46657	2.75	-18.93	-21.68
4-acetyl	-25430.50347	-25029.46632	2.91	-20.32	-23.24
4-nitro	-25482.52355	-25029.46792	1.91	-14.63	-16.54

**Fig. S9.** Adsorption of pyridine on site 2 of (101) anatase surface in presence of water with OH bound to site 1 and H on a) site 1, b) site 2, c) site 3)

**Fig. S10.** Adsorption of pyridine on a) site 4, b) site 3 of (101) anatase surface in presence of water with OH bound to site 1 and H on site 3.

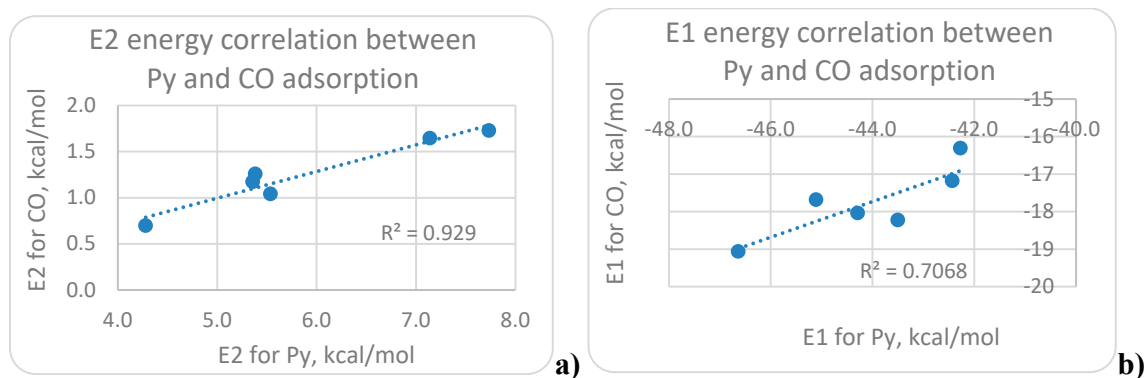

**Fig. S11.** Adsorption of pyridine on a) OH bound to site 1, b) K of KOH doped (101) anatase surface.

**Fig. S12.** Lattice distortion energy E2 caused by adsorption of 4-substituted pyridines on Ti sites 2-4 of anatase (101) surface in presence of dissociated water with OH on site 1.

**Fig. S13.** Energy correlation between Pyridine and CO adsorption on various sites of (101) surface, in the presence of dissociated water, or KOH, a) Lattice distortion energy E2, b) adsorption energy E1. Data points are taken from Table 1.

**Fig. S14.** Lattice distortion energy E2 correlation with the bond length of CO adsorbed on various (101) surface Titanium Lewis acid sites in the presence of dissociated water, or KOH, a) CO bond length, b) Ti-CO bond length. Data points are taken from Table 1.

**Fig. S15.** Typical gas phase titration with pulses of water, 0.1 mkl/pulse, of pyridine covered a) anatase titania  $\text{TiO}_2$  at 250 °C, b)  $\text{TiO}_2/\text{KOH}$  at 200 °C.

**Fig. S16.** GC/MS Calibration at temperatures 200-350 °C using a mixture of pyridine-water in 1:1 molar ratio while monitoring intensity of signals  $m/z$  79 for pyridine and  $m/z$  18 for water.

**Fig. S17.** Fitness test for the 1<sup>st</sup> order kinetics of pyridine exchange with water on surface.

**Fig. S18.** DFT Calculated frequency of pyridine ring vibration for 4-substituted pyridines adsorbed on site 3 of 12.5% KOH and 12.5% adsorbate coverage of (100) anatase surface as a function of the adjusted energy of adsorption, E3.
