22-24	1.21	0.38	29	0.32	0.12	11

**Table S5** Specific contrasts of the GLM of locomotor behaviour showing effect size and significance levels between CT4 and each other CT.

Dependent Variable: PhaseShift

Tukey HSD

(I) CT	(J) CT	Mean Difference	Std. Error	Sig.	95% Confidence Interval	
					Lower Bound	Upper Bound
4	2	0.2718	0.14505	0.775	-0.2038	0.7475
	0.2984	0.13256	0.513	-0.1363	0.733	0.733
	0.4218	0.13427	0.075	-0.0185	0.8621	0.8621
	.6302*	0.13566	<0.001	0.1854	1.075	1.075
	.9709*	0.16849	<0.001	0.4184	1.5233	1.5233
	1.2385*	0.15555	<0.001	0.7284	1.7485	1.7485
	1.2742*	0.15555	<0.001	0.7642	1.7843	1.7843
	.9439*	0.15891	<0.001	0.4229	1.465	1.465
	1.1423*	0.15252	<0.001	0.6421	1.6424	1.6424
	.7518*	0.14434	<0.001	0.2785	1.2251	1.2251
	.5788*	0.13766	0.002	0.1275	1.0302	1.0302

Based on observed means.

The error term is Mean Square(Error) = 0.729.

\* The mean difference is significant at the 0.05 level.

**Table S6** Specific contrasts of the GLM of PERIOD expression showing effect size and significance levels between CT4 and each other CT.

Dependent Variable: PhaseShift

Tukey HSD

(I) CT	(J) CT	Mean Difference	Std. Error	Sig.	95% Confidence Interval

	22	0.5366	0.31624	0.869	-0.5016	1.5748
	24	-0.1602	0.28472	1	-1.0949	0.7746

Based on observed means.

The error term is Mean Square(Error) = 2.143.

\* The mean difference is significant at the 0.05 level.

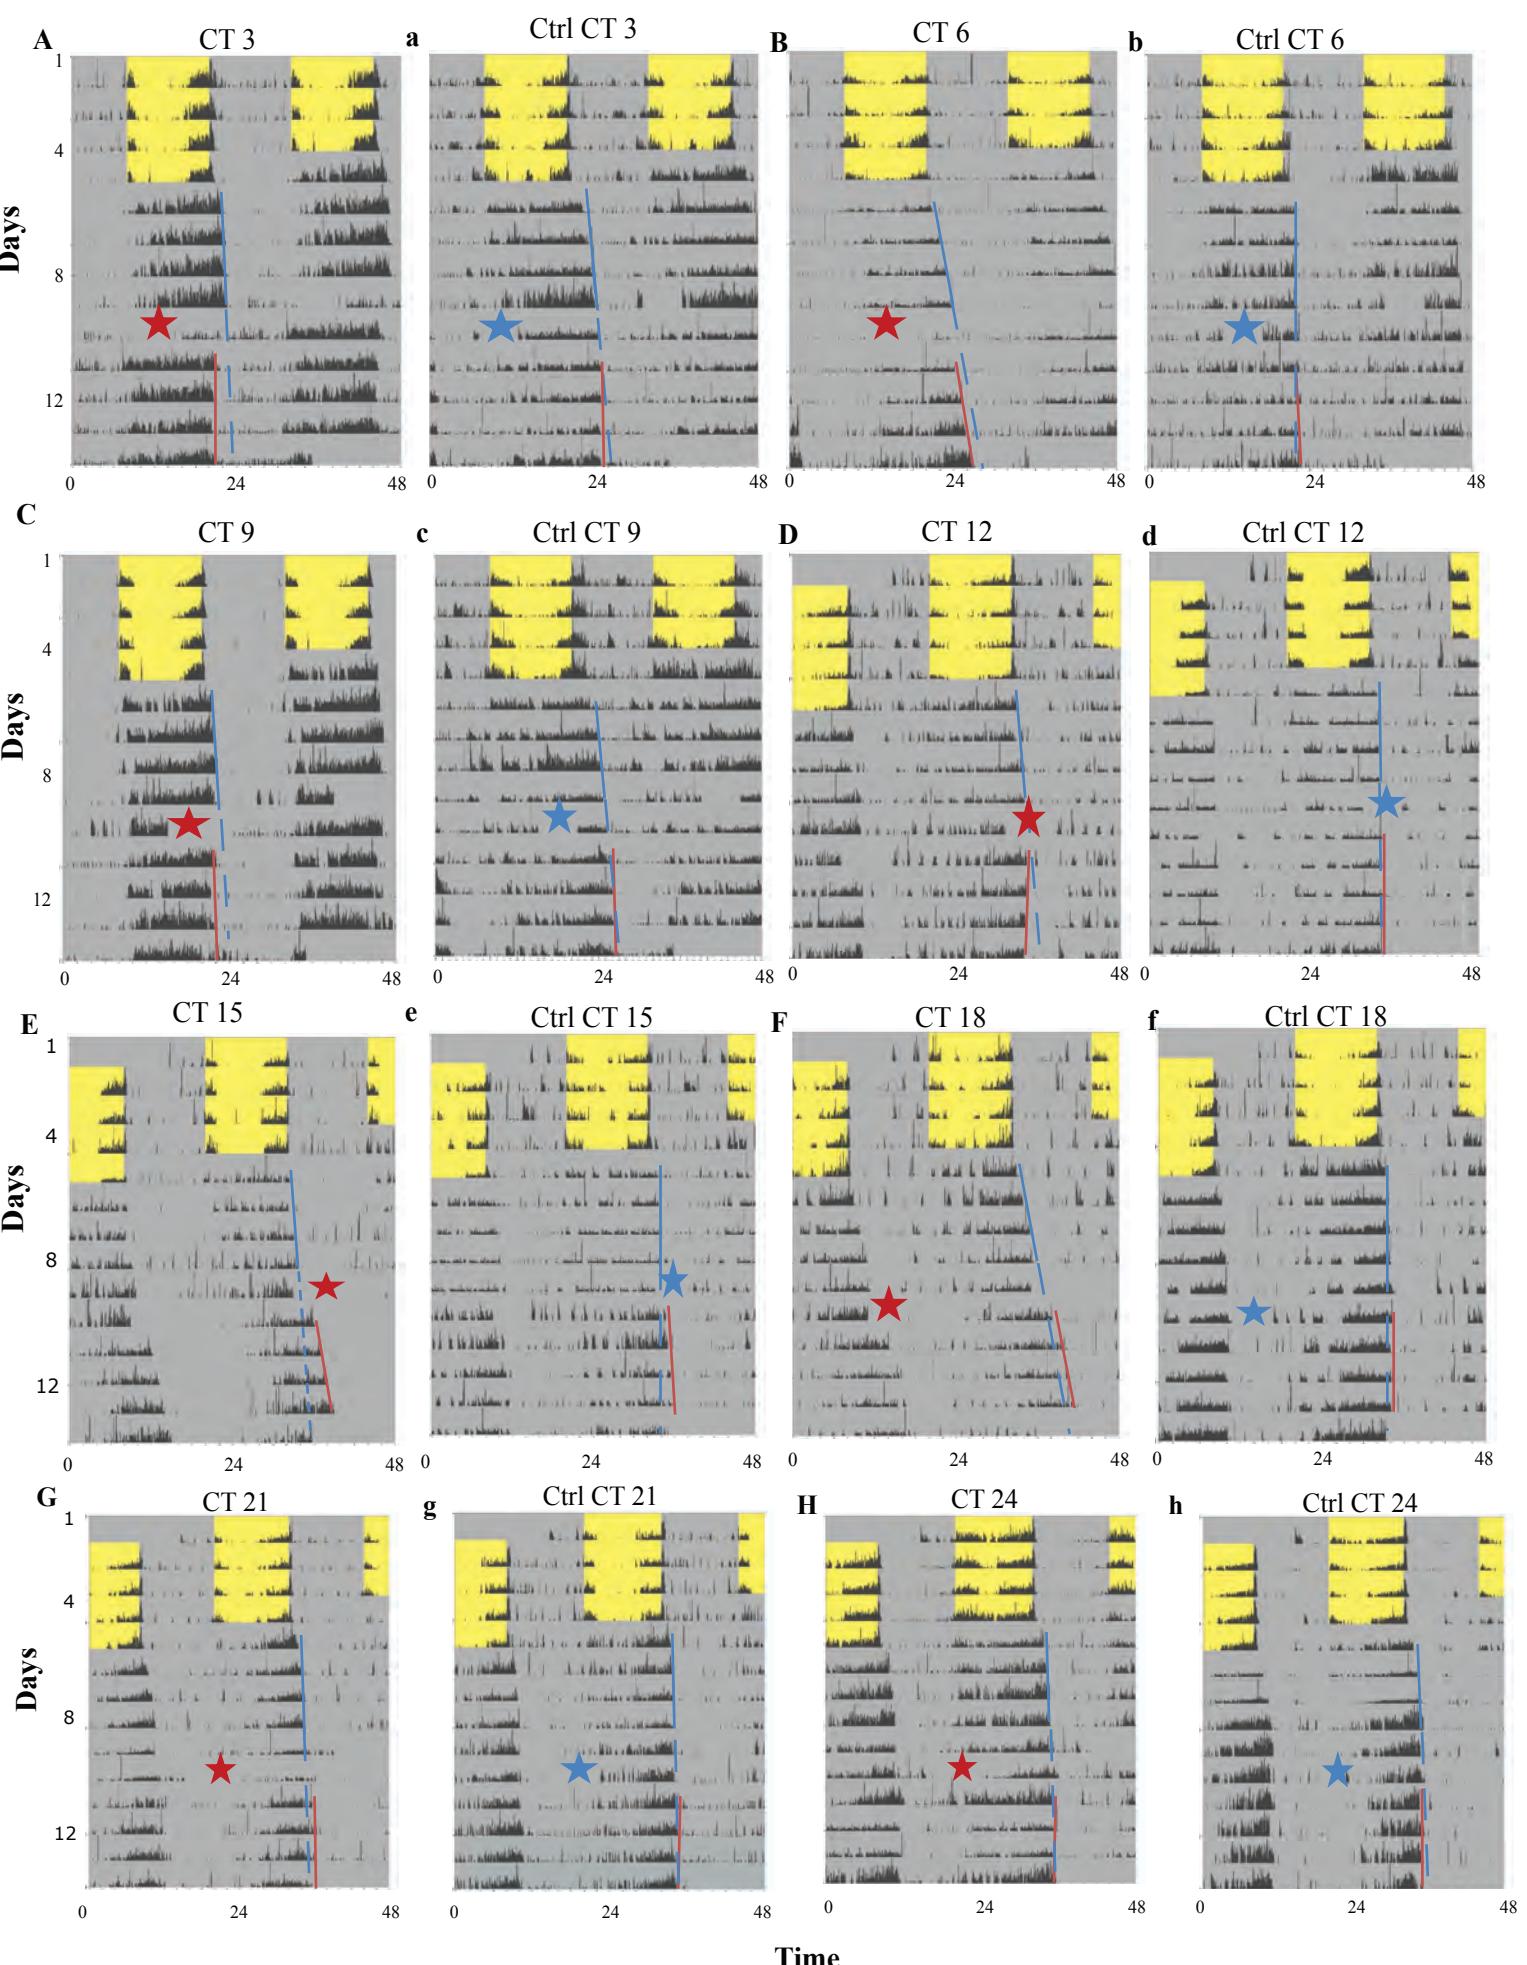

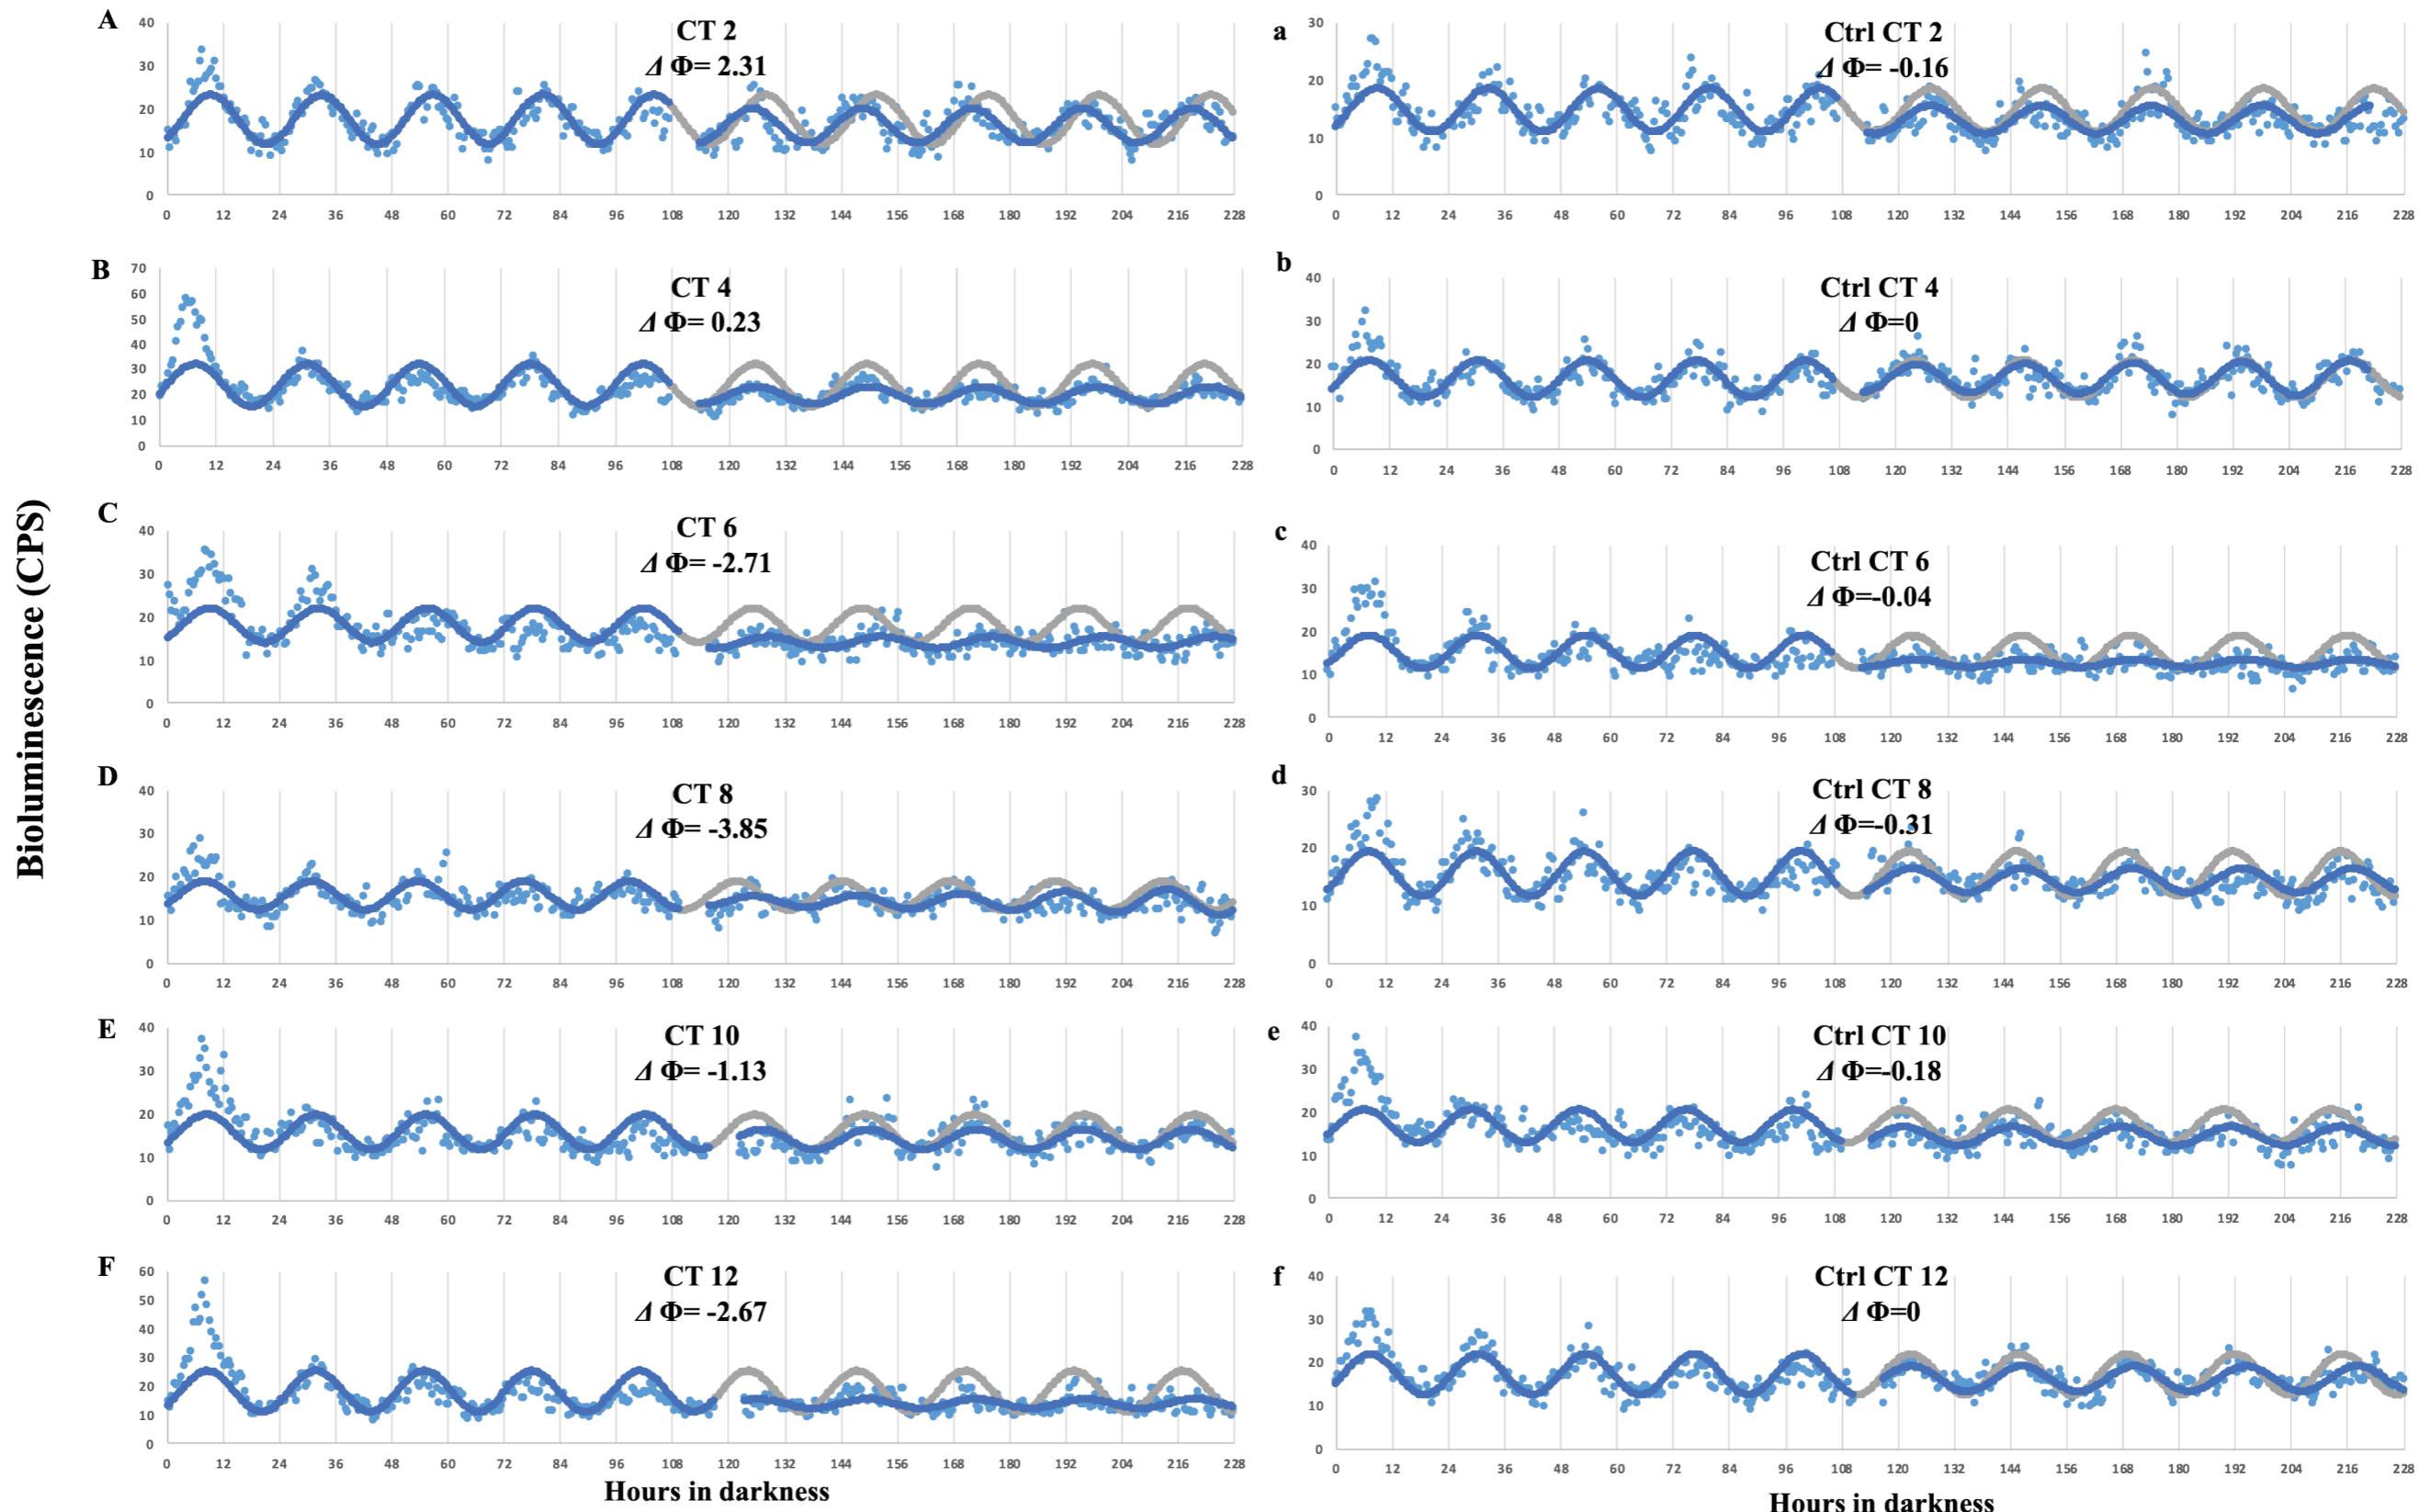

Figure S1. Representative example actograms of individuals showing the effect of anaesthesia administered across the circadian cycle. Here these actograms are shown in three-hour bins rather than the two-hour bins in the main analysis. Uppercase letters denote the anaesthetic group (with red stars denoting time of anaesthesia) and lowercase letters show associated controls (blue stars) at the same CT. Blue lines show regression line fitted to offsets before the intervention. Red lines show regression fit of offsets after intervention.

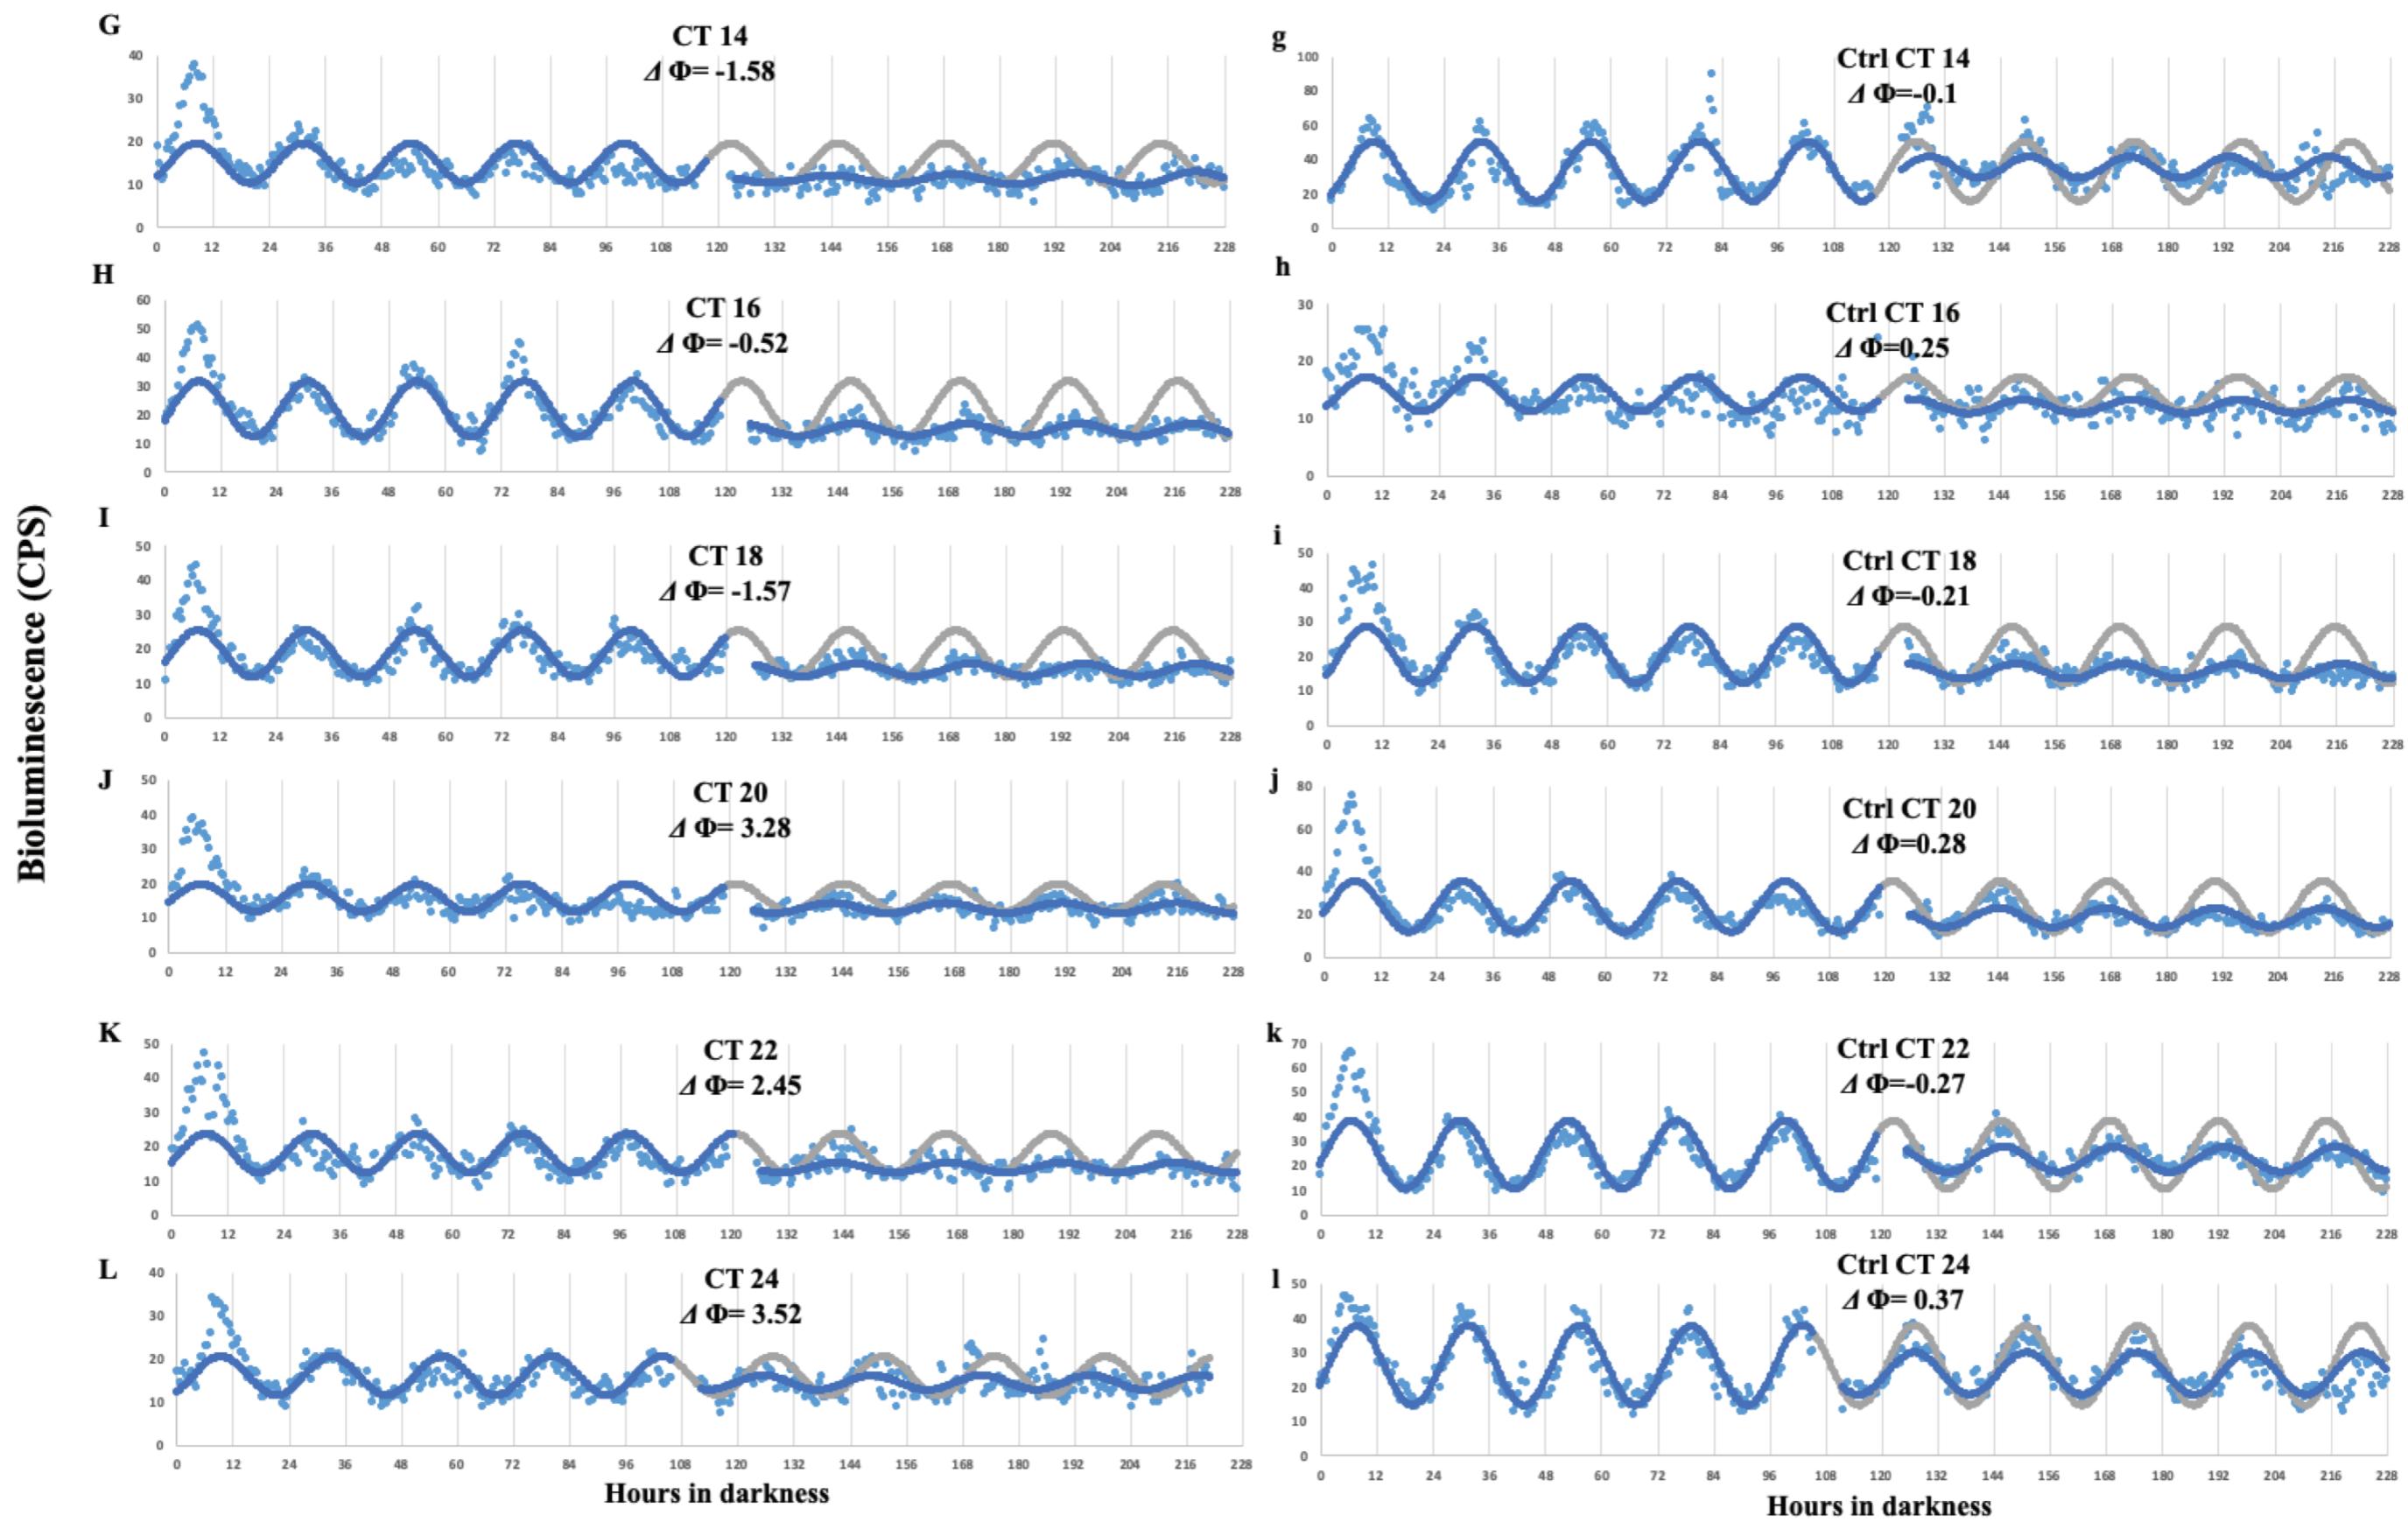

Figure S2. Example bioluminescence traces of individuals across the circadian cycle. Uppercase letters denote Anaesthetic intervention group and associated lower case letters show associated control at the same CT. The best model fits to the data are shown in blue lines (both before and after the intervention). Grey lines show the continuation of the pre-intervention model for comparison. Phase change denoted by  $\Delta\Phi$ .
