

## Protected Areas do not Outweigh Species Richness or Functional Diversity and Traits of Birds in Brazil

**Supplementary materials. Section 4.** Supplementary figure.

**Figure S1.** Number of Atlantic Forest bird species according to **(a)** trophic categories, **(b)** vertical strata of foraging, **(c)** microhabitat specialization, and **(d)** body masses (g), in unprotected (left) and protected (right) areas, which are separated by a vertical dashed line. Fragments are ordered by increasing fragment size. FruitNect = fruits and nectar eater, PlantSeed = plants and seed eaters, VertFishScav = vertebrate eaters and scavengers.
