

Figure S2a. Residuals vs fits plots to assess if the regression models evaluating the **mesiodistal crown diameter** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.

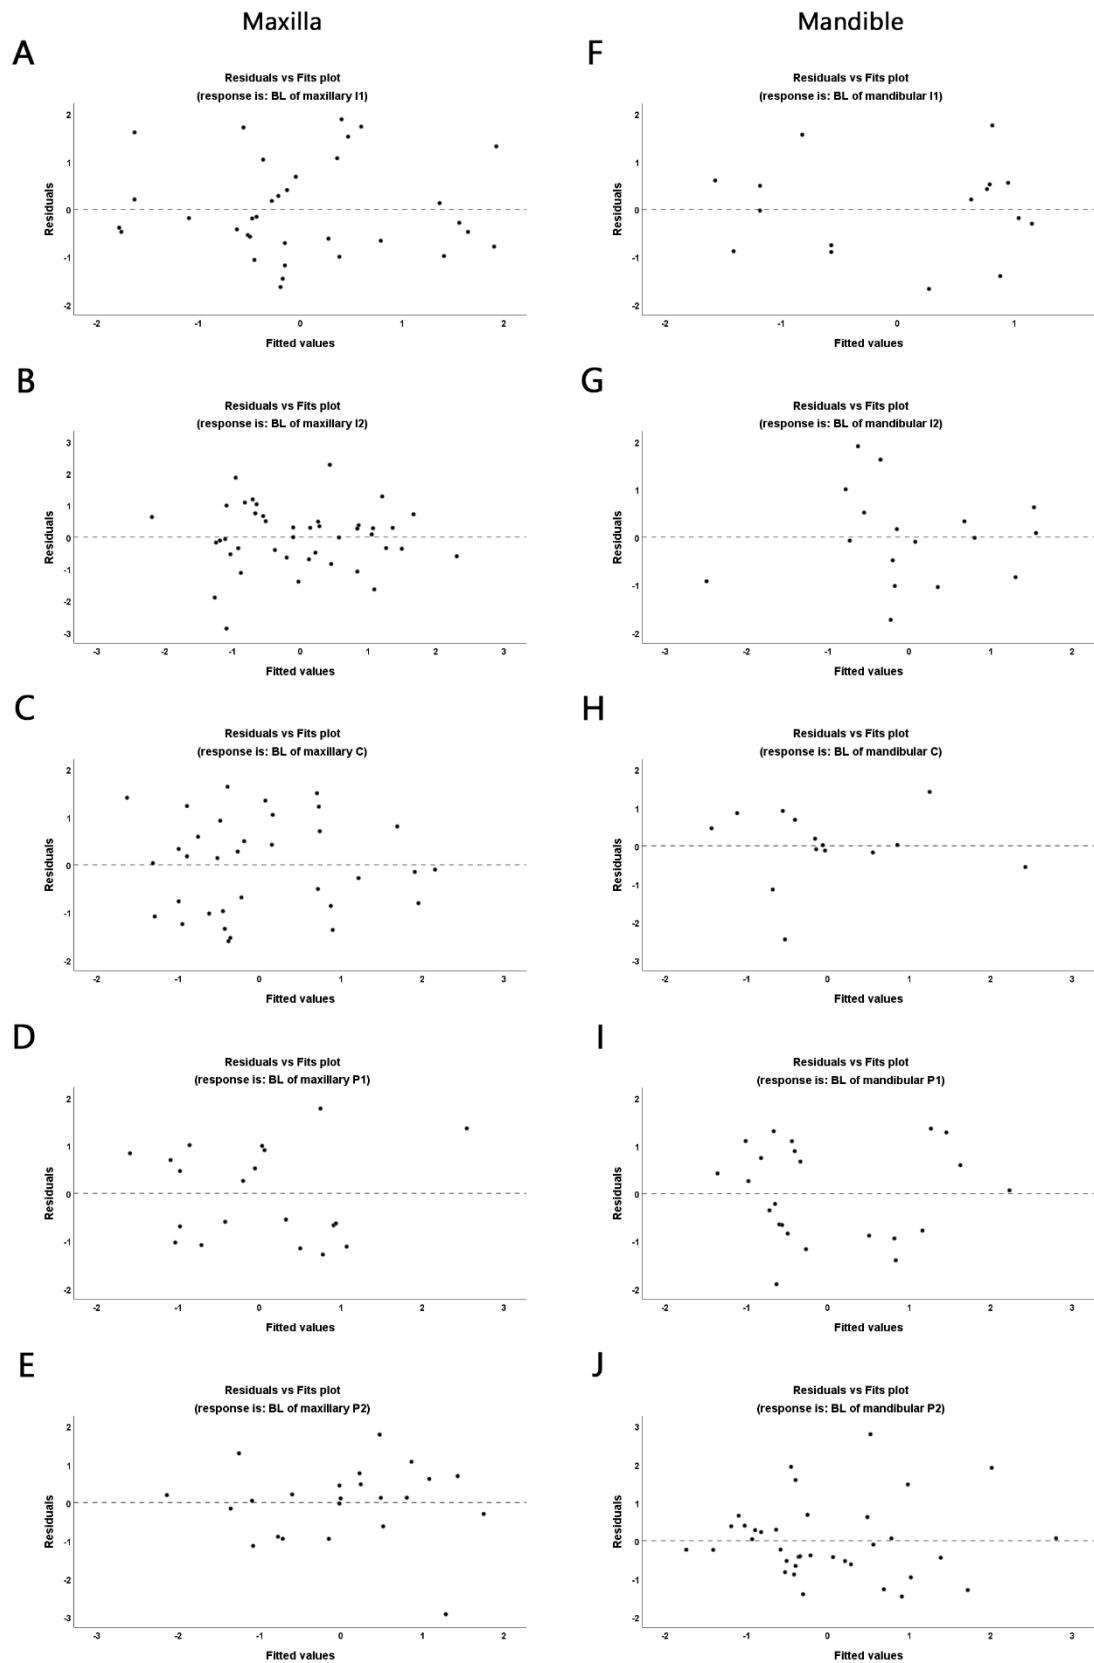

Figure S2b. Residuals vs fits plots to assess if the regression models evaluating the **buccolingual crown diameter** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.

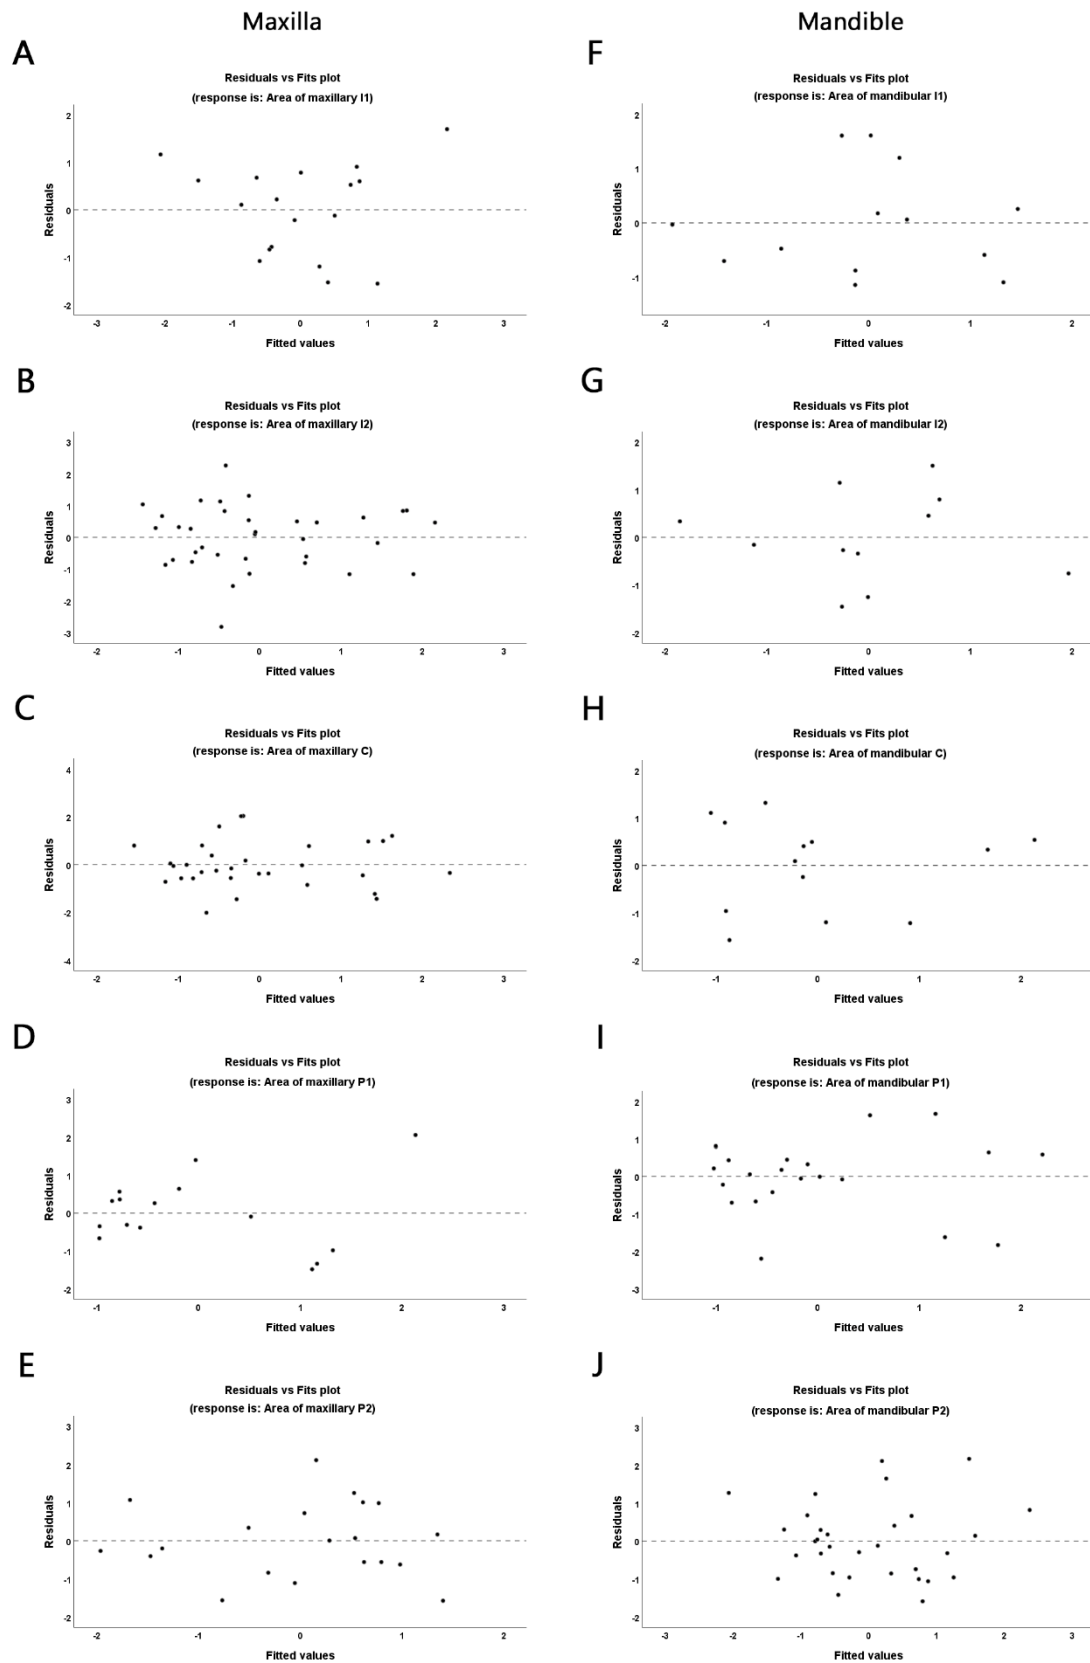

Figure S2c. Residuals vs fits plots to assess if the regression models evaluating the **crown area** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.

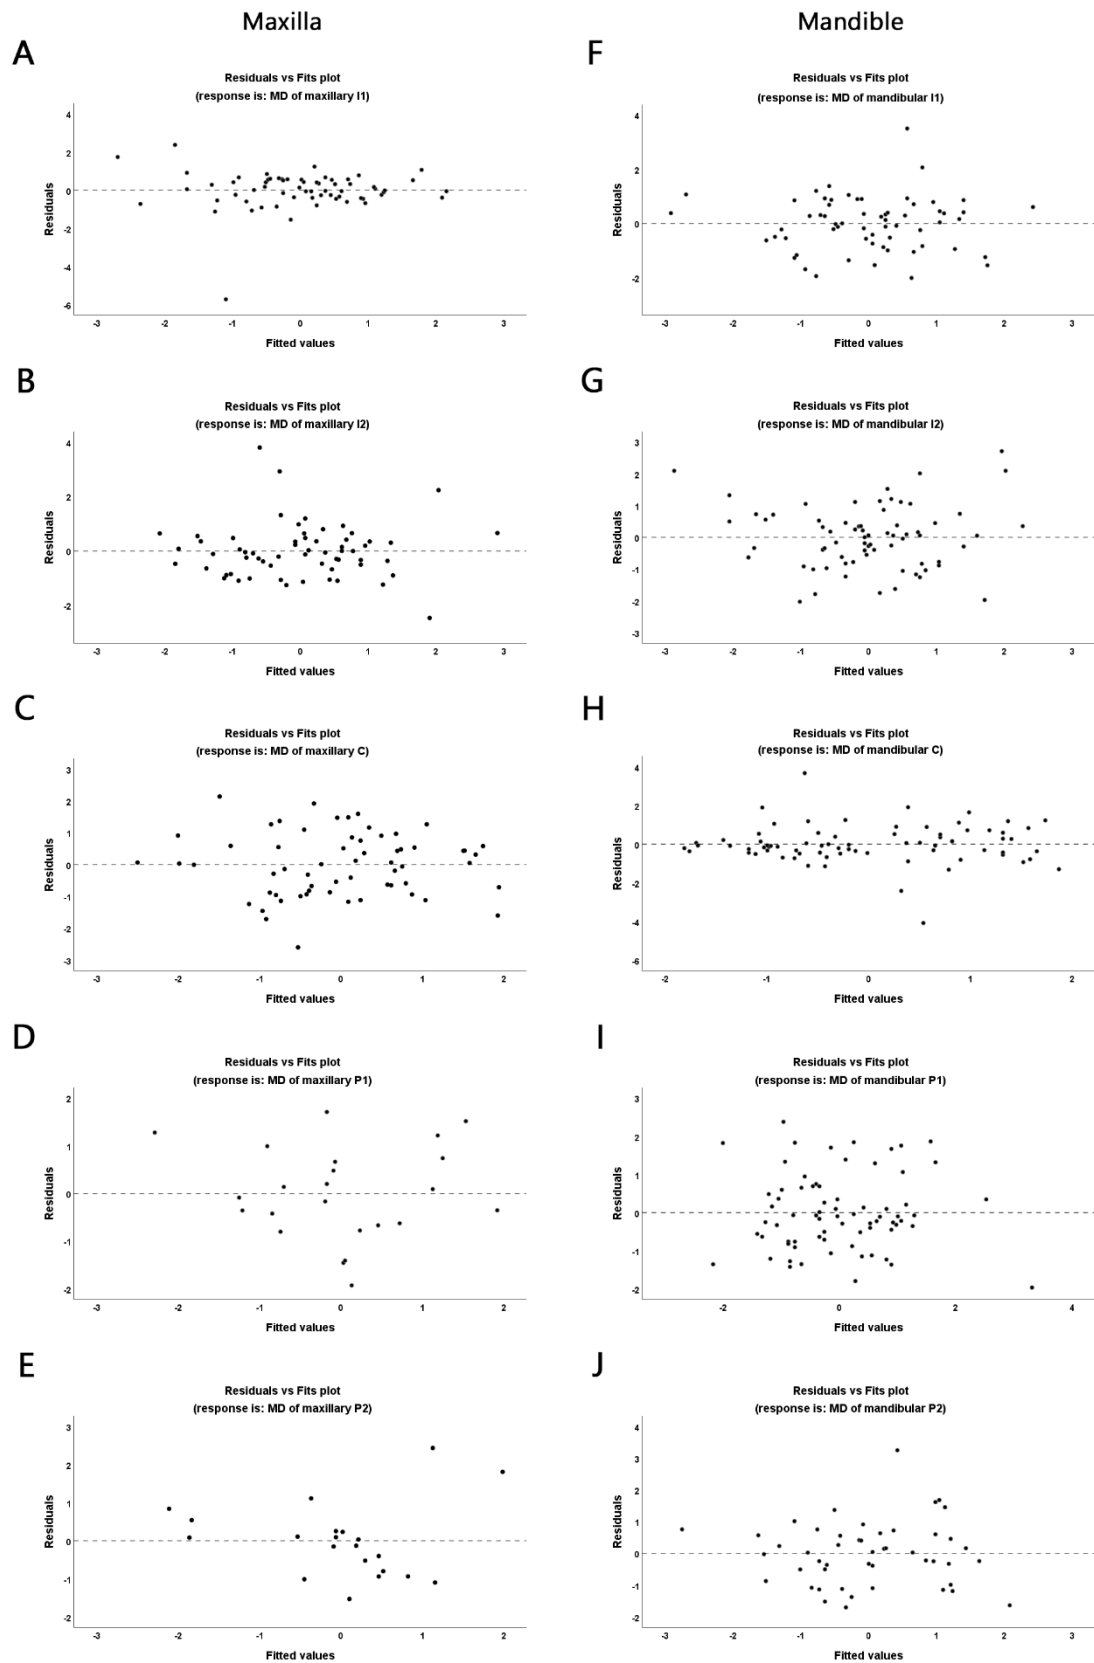

Figure S2d. Residuals vs fits plots to assess if the regression models evaluating the **mesiodistal cervical diameter** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.

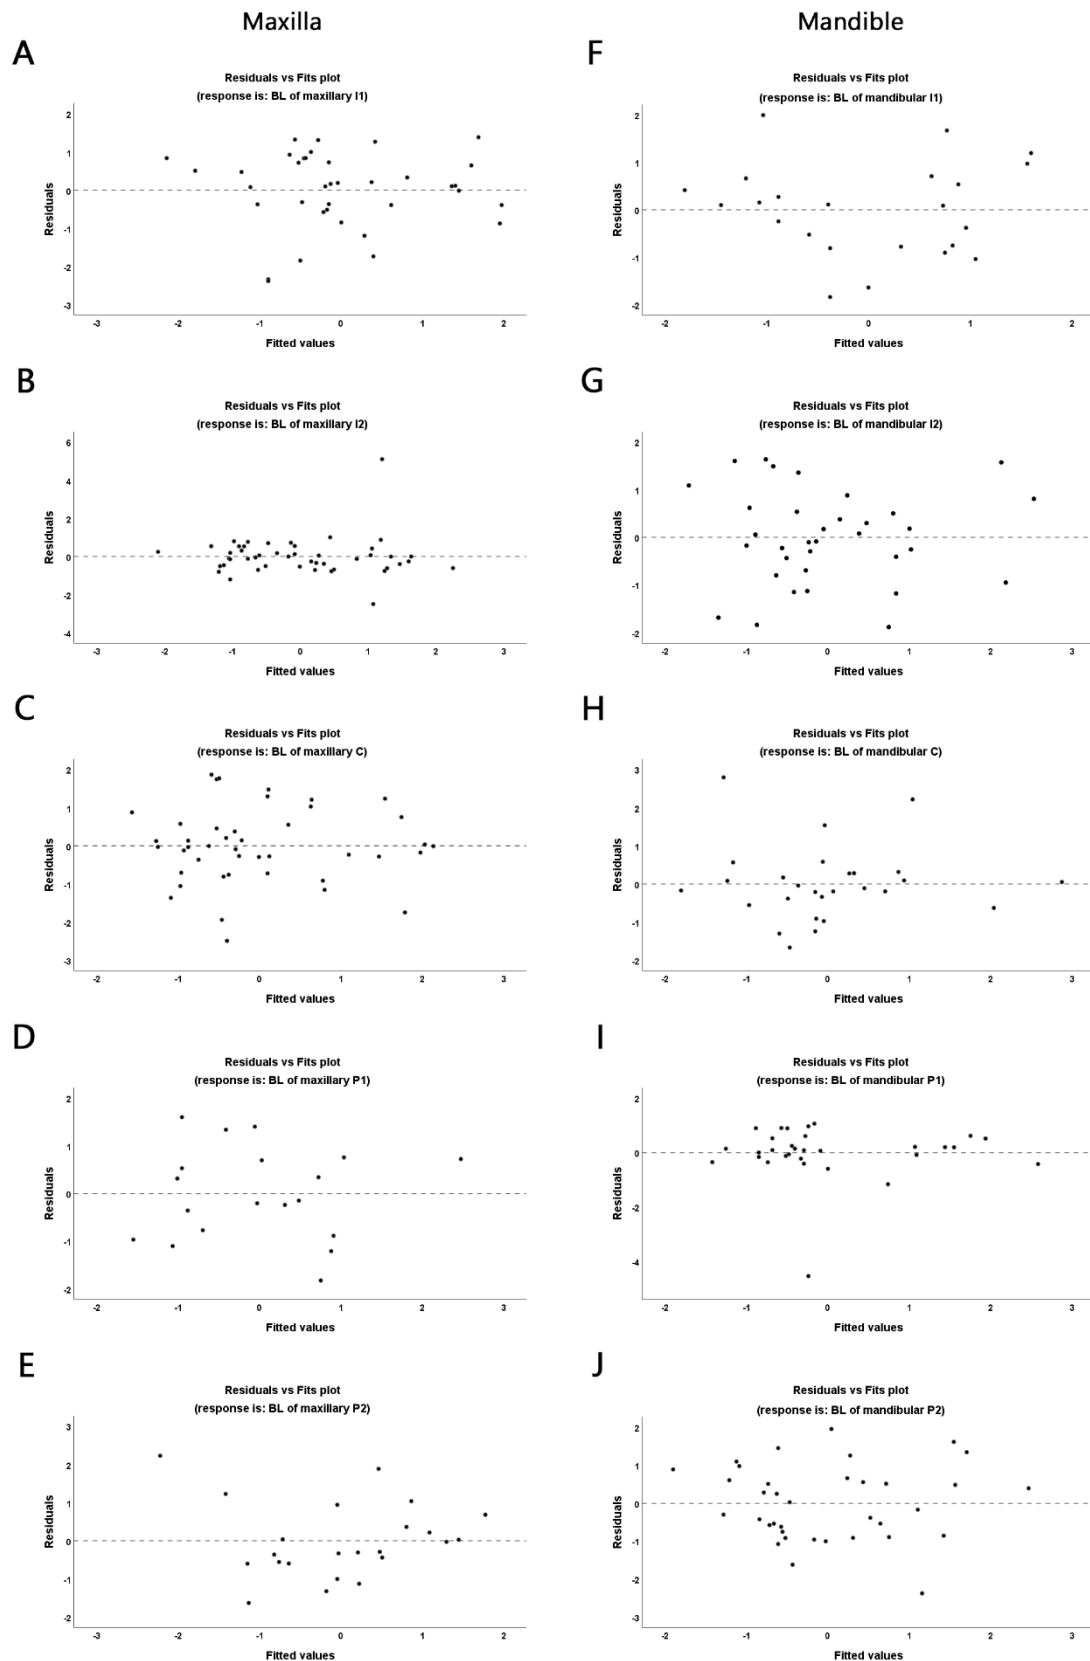

Figure S2e. Residuals vs fits plots to assess if the regression models evaluating the **buccolingual cervical diameter** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.

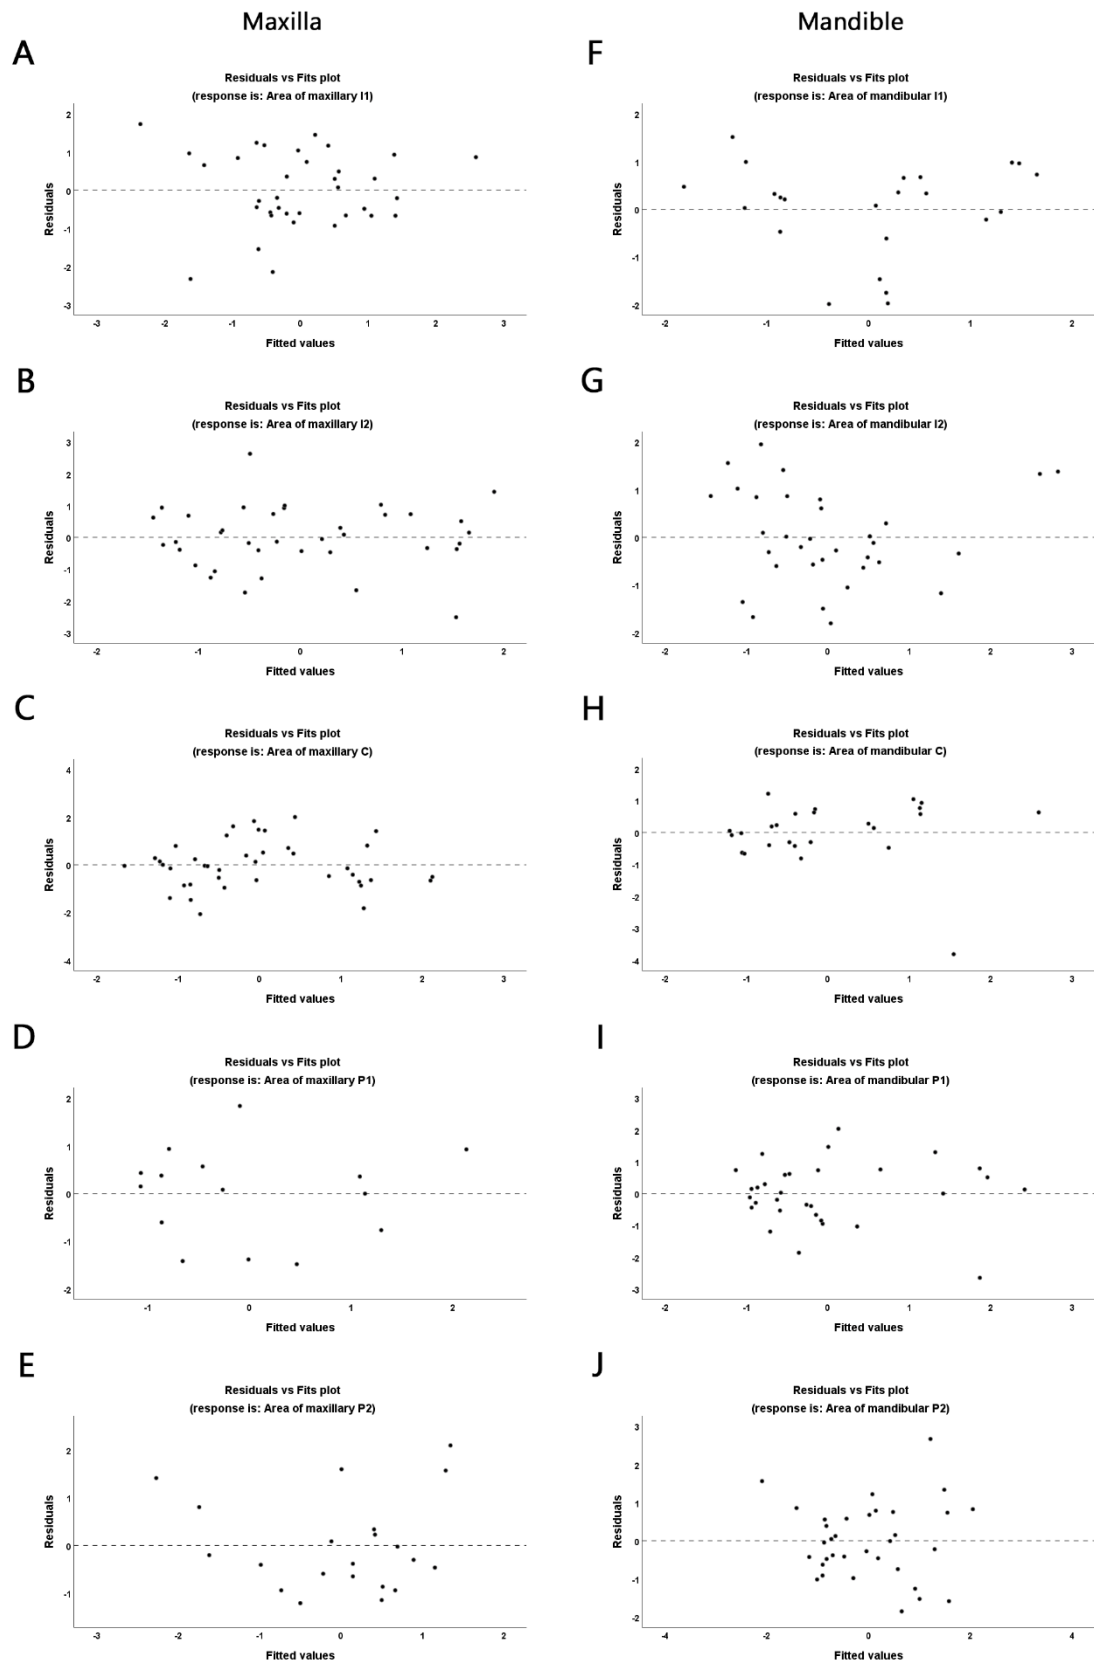

Figure S2f. Residuals vs fits plots to assess if the regression models evaluating the **cervical area** are appropriate for the data. (A–E) maxillary and (G–J) mandibular dentoalveolar structures.
