

This directory contains comma-separated-values files to accompany *Natural Convection Heat Transfer From an Isothermal Plate* by Aubrey Jaffer. Measurements were copied from the text of Aihara et al [1] and Faw and Dullforce [2]. The remaining heat transfer measurements were captured from graphs in the cited works by measuring the distance from each point to its graph's axes, then scaling to the graph's units using the “Engauge” software. Measurements obscured by other points in the graph were excluded.
