Special Issue

Artificial Intelligence for Online Safety

Message from the Guest Editors

In recent years, AI has taken on an increasingly central role in threats prevention. The reason why AI techniques are so popular and widely used in the threats and fraud detection industry is due to (i) their fast computational power in analyzing and processing data and extracting new patterns; (ii) their scalability, as models become more accurate and effective in prediction the more data they receive; (iii) their efficiency in obtaining results compared to manual efforts.Although both industry and academia fields have always invested significant efforts in tackling the above-mentioned problems, we have identified a gap between the fields. This Special Issue aims at bringing together research from a wide array of disciplines (mathematics, computer science, economy, philosophy, social science) to (i) understand the cases and motivations of fraudulent activities in online environments, (ii) find AI solutions to detect and analyze threats, malicious activities and the spread and misinformation, and (iii) derive means to prevent them.

About the Journal

Message from the Editor-in-Chief

Big Data and Cognitive Computing (BDCC) is a scholarly online journal which provides a platform for big data theories with emerging technologies on smart clouds and exploring supercomputers with new cognitive applications. It is a peer-reviewed, open access journal that publishes high quality original articles, reviews and short communications. The primary aims of this journal are to encourage contributions of high quality scientific papers relating to data management and analytics in industry, such as manufacturing, healthcare, education, media and business, data mining, and cognitive science. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Min Chen
School of Computer Science and Engineering, South China University of Technology, Guangzhou 510641, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility

: indexed within Scopus, ESCI (Web of Science), dblp, Inspec, Ei Compendex, and other databases.

Journal Rank:

JCR - Q1 (Computer Science, Theory and Methods) / CiteScore - Q1 (Management Information Systems)
