

## Special Issue

# Analysis of Agricultural Food Physicochemical and Sensory Properties

### Message from the Guest Editors

The physicochemical attributes of agricultural food products encompass a wide array of factors, including composition, structure and stability. Understanding these properties is essential for optimizing production processes, mitigating post-harvest losses and meeting regulatory standards. From the moisture content of fruits to the lipid profile of grains, each property contributes to the overall quality and safety of the end product. Through advanced analytical techniques, researchers can unravel the intricacies of these physicochemical properties, offering insights that guide both agricultural practices and food processing methodologies. This Special Issue focuses on research relating to the components of food, and their nutritional, physiological, sensory, flavor and microbiological aspects that affect the physicochemical and sensory properties of agricultural food. All types of articles, including original research, opinions and reviews, are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
