

Special Issue

Plant-Microbe Interactions and Microbial Application for Enhancing Sustainable Agriculture

Message from the Guest Editors

Sustainable agriculture involves maximizing beneficial plant-microorganism interactions, which are complex, dynamic, and continuous processes. The objective is to decrease the usage of chemical inputs, boost plant development, and improve plant tolerance to biotic and abiotic challenges through agricultural approaches that improve plant-microorganism interactions. In truth, multiple approaches might be used to achieve the goals of sustainable agriculture. It is necessary to investigate the potential of the soil microbiome/rhizospheric microbiome in plant health and nutrition. The aim of this Special Issue is to call for papers with a focus on plant pathology, agronomy, agricultural practices, enhancing resistance to abiotic restrictions, the function of microorganisms in biotechnology, and any other related topics. Therefore, this Special Issue aims to encourage the submission of contributions that explore innovative approaches to minimizing reliance on chemical pesticides and mineral fertilizers. We invite you to submit research articles, review articles, and short communications related to state-of-the-art plant-microbe interaction research.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
