Agricultural Innovations for Sustainable Cereal Production under a Changing Climate

Message from the Guest Editor

Cereals are the most widely grown arable crops and play a crucial role as a renewable resource for both human food and animal feed. However, their sustainable production has been challenged globally by climate change. It is anticipated that climate change will increase the frequency of cereal crop exposure to multiple abiotic and biotic stresses. The first aim of this Special Issue is to further explore the complex genotype–environment–management interaction effects on yield and quality of cereal crops, which will assist in establishing potential solutions for the optimal management of cereal production under a changing climate. It is also important to note that, within the framework of sustainable cereal production, GHG emissions mitigation and climate change adaptation must occur without compromising food security, grain quality, and farm economic viability. Therefore, the second aim of this Special Issue is to expand our understanding and identify research gaps regarding the capacity of both new and old agricultural technologies and practices at the field level. All types of articles are welcome, including original research, opinions, and reviews.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
