

Special Issue

Remote Sensing Technologies in Agricultural Crop and Soil Monitoring

Message from the Guest Editors

Remote sensing provides accurate and timely information for agriculture management, including crop health, crop and soil water status, and evapotranspiration. The recent developments in remote sensing sensors, platforms and processing tools are enabling enhanced monitoring of crop and soil conditions, with unprecedented details in spatial and temporal resolutions, larger penetration depths, and the capability to image in three dimensions. The use of these new features together with cloud-based artificial intelligence is expected to allow state-of-the-art progress in agriculture, meeting the world's growing demand for food production. This Special Issue focuses on the use of state-of-the-art remote sensing technologies in agricultural crop and soil monitoring. Accordingly, it will include interdisciplinary studies embracing agriculture with disciplines of remote sensing, modelling, artificial intelligence, cloud computing, and electrical engineering. Research articles are expected to cover a broad range of crop and soil status, e.g., soil moisture, texture, and tillage status, as well as crop health, biomass, density, and evapotranspiration. All types of articles are welcome.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
