

## Special Issue

# Role of Agriculture in Implementing Concept of Sustainable Food System

### Message from the Guest Editors

Sustainable and more environmentally friendly approaches to agricultural production are the current trend in the food economy. This is due to the increase in ecological awareness of society in relation to the necessity of protecting environmental components through the implementation of innovative techniques and technologies while implementing the concept of the sustainable food system "from field to table". The implementation of innovative solutions in agricultural practice and in agri-food processing will contribute to the sustainable development of the food system while maintaining effective management of natural resources and rational utilization of by-products generated in the processing of agricultural products. The aim of the Special Issue is to collect original articles and reviews in the field of healthy and environmentally friendly food systems "from field to table":

- The role of sustainable agriculture in shaping the quantity and quality of crop yields and supporting biodiversity;
- Sustainable food production and consumption as a pillar of a healthy society;
- Sustainable practices in food processing and distribution;
- Food security.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.
