

## Special Issue

# Agroforestry Planning

### Message from the Guest Editors

Agroforestry by definition integrates two main concepts: the yield of products and environmental benefits. It requires combination and interaction between different species of trees, shrubs, crops, and livestock.

Agroforestry systems become even more diverse when considering the interactions with insects, reptiles, and wildlife species and the interactions between climate, plants, soil, and water. Thus, a wide range of means could/should be used for identifying interactions among multiple social and ecosystem functions and services, and related drivers, processes, and impacts toward a sustainable agroforestry planning. In this context, the Special Issue aims to gather research papers and reviews dealing with tools, methods, case studies, and practical knowledge regarding all agroforestry systems and practices (forest farming, silvopasture, alley cropping, riparian buffers, windbreaks, and urban food forest) that respond to the new challenges and perspectives in agroforestry planning and landscape management.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
