

Special Issue

Sustainable Nutrient Management in Agricultural Production

Message from the Guest Editors

Modern agriculture faces many challenges. Nowadays, sustainable agriculture must answer the question of how to increase the yield potential of crops per acre or hectare without harming the environment. For this reason, sustainable agriculture is based on varieties of crops bred for high performance under different environmental conditions. Soil tillage systems also can play a key role as one of the most important factors to improve crop production. Furthermore, an indispensable element of sustainable agriculture is biodiversity and the abandonment of monocultures. This Special Issue focuses on the most recent and important findings related to “Sustainable Nutrient Management in Agricultural Production”, such as the application of environmentally friendly fertilizers, seed inoculations, biodiversity, mulching, rotating crops, planting cover crops and using different kinds of reduced soil tillage systems. These practices can lead to improvements in plant nutrition and high performance. All types of articles, such as original research and reviews, are welcome.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
