Plant–Soil–Microorganism Interaction in Grassland Agroecosystem

Message from the Guest Editors

Plant pathogenic fungi are a major threat to plant production and food security for livestock in the grassland agroecosystem. It is well known that plant-associated fungi and bacteria are involved in up-regulating stress-related genes, producing a variety of different phytohormones and activating the antioxidant defence system, which support plant growth and persistence in stressful environments. Unfortunately, the physiological and molecular mechanisms underlying plant–microbiology interactions under stressful environmental conditions have been barely studied. This Special Issue is aimed at compiling research, review, and opinion articles covering new scientific discoveries covering new insights into the physiology, biochemistry, molecular biology, genetics, and ecology of the microorganism partner, the molecular mechanisms involved in plant–microbiology interactions, the effects of the interaction on plant fitness under different environmental conditions, and biotechnological applications.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
