Postharvest Storage of Agricultural Products

Message from the Guest Editors

The duration of postharvest storage is fundamental for product quality, nutritional value, and thus consumer acceptability. In this perspective, it greatly influences the economic viability of the agricultural industry. As new markets expand the marketing possibilities, in many cases, the need for increased postharvest storage duration emerges. Several new techniques have been introduced to increase storability and preserve product quality during the postharvest period. However, agricultural commodities vary significantly in their requirements for postharvest treatments, while at the same time, the pressure for food safety and food security steadily increases. On this basis, postharvest handling of agricultural products remains a hot topic for the agricultural industry. The aim of this Special Issue is to highlight practices that contribute to the availability of high-quality agricultural products for the consumer. In this Special Issue, we welcome all types of articles about all kinds of postharvest treatments and about the postharvest physiology of agricultural products, including original research articles and reviews.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
