

Special Issue

Field Robotics and Agriengineering

Message from the Guest Editors

Field robotics are autonomous systems that can work in harsh and unstructured outdoor environments such as underwater, in mines, in forests, and on farms. Field robotics are designed to assist or replace humans performing tasks that are repetitive, difficult, or dangerous. In agriculture, field robotics are used in, among other things, crop nurseries, planting, seeding, harvesting, and material handling. For the robot to operate safely and efficiently, it is required to apply advanced control algorithms, localization and mapping, machine vision, obstacle avoidance, and situational awareness. This Special Issue seeks to investigate the latest developments and applications of field robotics in agriculture or any unmanned system, robot, drone, underwater, etc. For further reading, please visit the [Special Issue website](#).

Guest Editors

Prof. Dr. Ibrahim A. Hameed

Department of ICT and Natural Sciences, NTNU-Norwegian University of Science and Technology, Larsgårdsvegen 2, 6009 Ålesund, Norway

Dr. Redmond R. Shamshiri

Leibniz Institute for Agricultural Engineering and Bioeconomy, 14469 Potsdam, Germany

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Dr. Mathew G. Pelletier

Cotton Production and Processing Research Unit, United States

Department of Agriculture, Agricultural Research Services, Lubbock, TX
79403, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, FSTA, AGRIS, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Agricultural Engineering) / CiteScore - Q1 (Horticulture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.8 days after submission; acceptance to publication is undertaken in 5 days (median values for papers published in this journal in the second half of 2024).
