

## Special Issue

# Grass and Forage Diseases: Etiology, Epidemic and Management

### Message from the Guest Editors

Grass and forage plants play important roles in developing grassland animal husbandry, promoting sustainable agricultural development and environment protection worldwide. Diseases pose serious threats to grass and forage plants, with adverse impacts on growth, yield and quality. It is important to understand the etiology and epidemiology of diseases in grass and forage plants for effective management. This Special Issue will cover the current research advances and future prospects in the etiology, epidemic and management of grass and forage diseases in China. The cutting-edge research can be summarized as follows: pathogenicity; disease resistance breeding; and green management. We are soliciting submissions relating to the etiology, epidemiology and management of grass and forage diseases in China.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
