

Special Issue

Humic Substances: Importance for Agriculture, Affinity and Interactions with Soil Amendments and Pollutants

Message from the Guest Editor

Humic substances (HSs) constitute a major pool of recalcitrant organic carbon and nitrogen in soils and sediments. HSs have a beneficiary effect on soil aggregation and structure, pH buffering, cation exchange and water retention capacity, they regulate immobilization and transport of nutrients, affect plant metabolism and enzymatic activity related to cell processes acting as promoters, biostimulants and stress relievers. This Special Issue will focus on “Humic Substances: Importance for Agriculture, Affinity and Interactions with Soil Amendments and Pollutants”.

Original research articles, review articles, communications, letters and opinions are welcome, providing innovative insights into all related topics of interest that include, but are not restricted to:

- structural and physicochemical properties of HSs, characterization of fractions;
- interactions of HSs with chemical compounds related to sustainable agriculture;
- impact of HSs and HS-containing materials on soils, plants, living organisms, animals;
- association of HSs with toxic compounds to remove pollutants;

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
