New Strategies for Forage Breeding and Cultivation Under Challenging Conditions

Message from the Guest Editor

Forage plants are crucial for livestock nutrition, enhancing soil health, and supporting biodiversity in agricultural ecosystems. However, they face significant challenges, including climate change, soil degradation, water scarcity, and pests and diseases, which threaten their productivity and sustainability. Addressing these problems requires a combination of good agricultural practices, innovative technologies, and the development of more resilient crop varieties. Cutting-edge research on breeding forage plants leverages traditional breeding efforts to develop varieties with enhanced traits, tolerance to abiotic and biotic stresses, and nutrient quality. Additionally, integrating sustainable management and adopting innovative practices such as precision agriculture, intercropping, and regenerative agriculture promotes ecological balance and optimizes forage production and quality. This Special Issue aims to consolidate and disseminate innovative research on the genetics, breeding, cultivation, and management of forage species. We welcome original research articles, reviews and case reports covering all related topics.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
