

## Special Issue

# Agronomy of Direct-Seeded Rice

### Message from the Guest Editors

Rice is grown in more than 100 countries, but more than 90% of rice is grown and consumed in Asia.

Traditionally, rice has been grown using transplanted methods, but now, due to the laboriousness of this process and water shortage, there has been a trend toward direct seeding (dry, wet, or water seeding) of rice. In some countries, however, the agronomy of direct-seeded rice is still not well understood. This Special Issue welcomes review and research articles on different agronomic aspects (water management, weed management, genotype performance, nutrient management, seeding rate, row spacing, innovations, etc.) of direct-seeded rice. In addition, grain quality traits influenced by agronomic practices will also be addressed.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
