

Special Issue

Applied Plant Breeding and Quantitative Genetics Research to Improve Forage and Turf Plants

Message from the Guest Editor

Plant breeders utilize phenotypic and genotypic variation to develop new cultivars with desirable traits. Applied forage and turf breeding come with their unique challenges and obstacles, including a wide array of species and complex traits. This Special Issue will focus on the genetics and breeding procedures used to develop improved forage and turf. The Special Issue will include both review papers and original research papers, and papers may focus on methodology or results, including reports on heritability and gain from selection using direct or indirect selection. The articles can be on either forage or turf species, including temperate or tropical grasses and legumes, and address traits specific to forage and turf, including establishment and persistence, forage mass and nutritive value, aesthetic appearance, and biotic and abiotic stress tolerance.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
