

## Special Issue

# Quantitative Trait Locus Mapping for Crop Plants

### Message from the Guest Editor

Recent advances in crop phenotyping and genotyping has brought about new abilities to effectively identify QTL in genomic regions associated with important plant traits and our ability to identify QTL associated with important traits has significantly increased.

Identification and validation of QTL for important traits across crop plants allows useful and efficient ways to do marker-assisted selection and to combine this with genomic selection methods. This Special Issue will focus on “Quantitative Trait Locus Mapping for Crop Plants”. We welcome novel research and reviews which provide information on novel QTL, new markers associated with useful QTL, and QTL validation, on a variety of traits and crops, which will provide the molecular marker tools necessary for plant breeders to employ genomic informed selection of new varieties.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
