

Special Issue

The Role of Mineral Elements in the Crop Growth and Production

Message from the Guest Editors

Mineral elements, including macro- and micronutrients, have multiple biological functions in the whole life cycle of crops. The growth, production, and quality of crops and their fruits are indispensable from mineral elements, especially the balance in their bioavailable quantities in soils. In recent years, sustainable agriculture has become an important issue in realizing the UN's Sustainable Development Goals. Keeping the balance of mineral elements and increasing the bioavailability of mineral elements such as phosphorus (P) and trace elements in agricultural production will be pivotal for sustainable agriculture. This Special Issue is therefore inviting contributions of articles for publication, focusing on (1) how mineral elements (macro nutrient: S, Ca, Mg, K, P, N; trace elements: Fe, Mn, Cu, Zn, Se Mo, Ni, Se; beneficial element: Si) affect the growth, production, and quality of crops; (2) bioavailability and dynamics of chemical and microbial processes of mineral elements in the crop rhizosphere; and (3) interaction between mineral elements in soil–crop systems from microcosm to ecosystem scales.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
