Symbiotic Associations of Plants with Beneficial Microbes: Perspectives and Challenges for Agronomical Applications

Message from the Guest Editor

Dear colleagues, Plants, as all the other eukaryotes, live and interact with complex microbial communities. Root symbioses, and more generally the interaction with soil beneficial microbes, positively influence plant's health, productivity and tolerance to stresses, both in wild and cultivated conditions. Consequently, the interest has risen towards a science-driven use of plant beneficial microorganism as natural fertilizers. Recent analytical advances such as high throughput (meta)-omics, plant phenotyping and refined bioinformatic tools allow a better knowledge of beneficial plant microbe interactions in a systems biology perspective. However we are still far from an exhaustive understanding of this topic, at the same time so promising and challenging. The purpose of this Special Issue is to bring together the current knowledge on how plant symbioses can be managed to improve plant health, to depict an up-to-date scenario of the potential to turn plant symbiotic interactions into agricultural practices. Dr. Alessandra Salvioli di Fossalunga

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
