

Topical Collection

Zooarchaeology: The History of Animal-Human Relations in the Natural and Cultural Environment

Message from the Collection Editors

Zooarchaeological research is of great importance for better understanding of current processes, acting against the negative impact of human activity and better monitoring of current and future human relationships, as well as the natural and cultural environment.

Zooarchaeology helps us better understand animals' nature and form a better partnership with them.

This Topical Collection welcomes articles that address the following topics: a) animals as an indicator of human activity in the natural environment; b) animals in the social, magical, ritual, and religious life of past societies; c) paleopathology and alternations of bones and teeth as a tool to learn about the relationship between humans and animals; d) animal migration as a result of human activity. Considering the increasing importance of biomolecular technology in zooarchaeological research, we welcome articles that explore the above issues not only through classical macroscopic methods, but also through genetic and isotope data.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
