Farm Animal Transport

Message from the Guest Editor

Worldwide about 70 billion farm animals are produced for food with around two thirds farmed intensively. Most of these animals will experience more than one journey, as the production stages have become more specialised. There is considerable evidence that the stressors associated with handling and transport often negatively affect the health, productivity and welfare of the animals. For meat animals transported to slaughter, meat quality may be impaired by stressful conditions experienced during the transportation. Mortality during transport is common, and may be accepted where levels do not have an economic impact, yet this is both an ethical and a sustainability concern. We invite original research papers that address improved methods for handling farmed animals during loading/unloading, conditions during transit, including vehicle design and on-board monitoring systems, and consequences for animals of being transported in terms of physiology, behaviour and productivity. Additional topics may include the effects of training human handlers and pre-transport conditioning techniques to reduce the impact of transportation.

About the Journal

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2023, ranks 10/80 (Q1) in 'Agriculture, Dairy & Animal Science'; 16/167 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.0.

Editor-in-Chief
