

# Special Issue

## Horse Surgery

### Message from the Guest Editor

Horse surgery has been increasingly enhanced in terms of quality in recent years, both in field and hospital settings. Advanced techniques described in peer-reviewed literature both for soft and hard tissues have improved outcomes for survival or for athletic prognosis. It is important for the equine surgeon community to share knowledge as much, to spread the most efficient innovative operative solutions for horses. With this initiative, our goal is to encourage scientists to publish their experimental and theoretical research in as much detail as possible. The purpose of this Special Issue is therefore to present high-quality documents related to advancement in horse surgery, including every apparatus. Research articles and original reviews will be accepted for this Special Issue. Topics could include case selection, prognosis assessment, peri- and intraoperative treatments, procedures to improve outcomes, advanced or innovative surgical techniques, original surgical instrumentation, postoperative assistance, and complication management.
