

# Special Issue

## Pig Transport 2016

### Message from the Guest Editors

Pigs are transported around the world, usually twice in each growing pigs' life—at weaning (or 25 kg) and again going to market. Breeding stock are also transported to production units. Transport of pigs has a large economic cost to the food chain and can also be a welfare concern. As a continuation of previous the Special Issue, "Pig Transport" (

[http://www.mdpi.com/journal/animals/special\\_issues/pig-trans](http://www.mdpi.com/journal/animals/special_issues/pig-trans)), "Pig Transport 2016" will revolve around any aspect pertaining to the science of swine transport.

Authors are encouraged to submit papers in the area of swine transport. We look forward to producing an internationally-important seminal issue on the transport of commercial swine.
